## MICHIGAN BELL'S \$120,000,000 PROGRAM HAS MADE WORK FOR THOUSANDS

To supply service again when and where it is wanted, and to give you the quality of service you want in the future, Michigan Bell has under way a 5-year \$120,000,000 expansion and improvement program.

Thousands of workers are engaged in completing this huge project. They include not only our returning veterans, but hundreds of additional employees as well — bringing the total to the largest number in Michigan Bell's history. And the program means work for scores of other folks supplying materials and equipment, and doing skilled construction.

Money to finance this \$120,000,000 program must come from the savings of thrifty people who are willing to invest in Bell System securities. But if prospects for Telephone Company earnings are unattractive compared with those of other companies, those people will place their savings elsewhere.

The rate of Telephone Company earnings has been declining in recent years to a point where it is now substantially below the average of other industries. If this condition should continue for too long a time, our ability to raise the money required to meet expected telephone needs would be weakened.

The future quality of your telephone service depends on rates that will produce earnings attractive to investors. We believe our customers want good service, even if it costs a trifle more than inferior service.

Technical improvements in the past brought rates for good service down and have kept them down in the face of rising costs. As rapidly as future improvements will permit, we expect and want our rates to come down still further. For, Michigan Bell wants rates no higher — and no lower — than necessary to insure good telephone service.
