SPRINGTIME IS FERTILIZING TIME
DON'T LET CRAB GRASS
CROWD YOU OUT THIS YEAR

WAYNE JONES

Now is the time to apply your emergency crab grass killer. That means you put the killer on before the crab grass can start to grow. One application keeps the whole year, and since it's time for fertilizer, to make the good grass grow, apply them together and save time and money.

X-IT

Stops crabgrass - feeds your lawn! Gives your lawn all the high nitrogen fertilizer it needs for a good start, and prevents crabgrass, bentgrass, grass, and foxtail - all in one application! Use in early spring.

The Green Thumb
By GEORGE ABRAHAM

Buying a new mower? Many are wondering which mower does a better job - the old reel type or the rotary mower. If you're a rough - and - ready gardener and are thinking about buying a new mower, my advice is to make it a rotary type.

The reel type is gaining in popularity, but it's mainly for the man who wants a perfect lawn. The rotary type mows weeds and all and to me it's one of the greatest boons to home gardening.

How about alternate mowing with a reel mower and a rotary mower? This might make good sense since the rotary mower "sucks up" the clippings, while the reel type clips more cleanly with its scissors action.

Better stick to the rotary mower because it cuts well and leaves the lawn with that well-kept look. In August when the plain seeds up a flower stalk you'll be glad to have a rotary mower, because the reel only knocks it down.

Starting morning glories? Some gardeners have trouble getting the morning glory seed to germinate. The seed coat is hard and bony, but you'll be surprised to see how quickly the seed germinates if you start them in the Jiffy pellets. Keep them moist and WARM ... 80 degrees until germination starts. With the 80 degrees temperature you get seed starting within two days.

Some gardeners start hard-coated seeds such as morning glory, wood roses, etc. by filling a notch in the seed coat, until you see the white meat. This allows moisture to enter and hastens germination.

NOTE: Since the morning glories can be started within a couple of days from seed, wait until May to start your plants. Many start them outdoors, directly in the ground.

Pepper seeds are one of the most stubborn to start indoors. They need plenty of heat - 80 degrees and moisture at all times. Salvia

Geranium 'Tree'
Is Garden Accent

Plants grown in "tree" or "standard" form have, for generations, been used as accents in the garden - to center a bed, line a path, guide the view to a distant point, the use of a far - off vertical stem.

There are many plants that can be grown as standards. Among the most popular nowadays are lantana and fuchsia. Heliotrope used to be a favorite and might be again, while the easiest plant to train in tree form is the geranium.

Would you like to grow a

A "TREE" or "standard" plant is a garden conversation piece. This one is a lantana.

cuttings - and start new plants? Answer: No, make cuttings about four inches long. Remove bottom leaves and insert cuttings in boxes of builder's sand, perlite, vermiculite or plain tap water. After they have rooted, pot them up in a mixture of one third each, sand, peat and loam. Cut the mother plant back to within four inches, and it will form a dandy plant by May or June.

A BEDROOM located adjacent to the main living area becomes a visual asset when an old-style swinging door is removed. A floor-to-ceiling, translucent-paneled sliding unit was substituted. To provide a rich background for the bed and to tie the two rooms together, the far wall of the bedroom was covered with the same Masonite brand paneling. Wall-to-wall carpeting was extended into the bedroom to give the appearance of greater expanse.
