

Spring Is The Time To...
Fertilize

A well-fed lawn is a healthy lawn... Which means it's better able to withstand disease, insects and drought. Not to mention holding off crabgrass and other weeds. If you want to have a beautiful, lush, green lawn this summer... FERTILIZE NOW!

Garden Chatter

One of the newest stooop-savers in gardening is seed embedded in water-soluble tape. Seeds are accurately spaced according to kind.

The gardener need only open a trench in previously-prepared soil, lay the tape in the bottom, cover to the depth given in the directions on the package, and firm soil to tape.

Rain or artificial water will dissolve the tape, leaving seeds in place, ready to grow.

GARDENERS who have trouble after eating cucumbers should grow the kind named Burpees.

Its low acid content allows anyone to indulge and yet be comfortable afterward.

IN SPEAKING of beans, why do people always say "green" beans?

There also are yellow beans (more commonly known as "wax" beans) and purple-podded beans which turn green when cooked.

A GOOD "mixer" in any garden is baby's breath, with its delicate branching habit and tiny white blossoms.

It succeeds in any soil, in full sun, and matures so quickly that you'll need to sow seeds every two weeks in order to have flowers all summer.

WHY NOT grow perennial flowers from seeds? If sown in spring the little plants will be ready to move into permanent locations well before frost.

A good many kinds will have a flower or two the first year.

ANY HIGH analysis soluble fertilizer may be used as a "starter" solution to pour around plants when they are moved from one size container to another or from container to garden.

HOUSE PLANTS can be grown from seeds at any time of year. Asparagus fern, gloxinias, cinerarias, begonias and cacti are among those readily produced in this manner.

NOW THERE ARE first generation hybrids of portulacas too! And this class, named Sunkiss, has larger flowers on larger plants than the ones you're previously grown.

New Portulaca,
Poppy Introduced

It HAS BEEN some time since a new California poppy was introduced and this newcomer, Ballerina, looks as its name suggests. The dainty flowers with their crinkled petals literally dance in the breeze.

The new class of portulacas, named Sunkiss, are first generation hybrids, which have not previously been available in this particular flower.

The product of Dr. David Gilbert, a plant breeder, they have double flowers with ruffled petals, larger than those you've previously grown.

Blooms may grow up to 2 1/2 inches across and the dwarf plants may spread two feet in diameter.

Seeds of Sunkiss can be bought in separate flower colors: scarlet - red, pink, gold, cream, orange and white. This means that you can use portulacas to paint garden pictures in the same way you have previously used petunias!

Seeds are available in a mixture of colors which include cream, rose, orange and apricot.

While portulacas enjoy poor soil and a place in full sun, California poppies perform best where summers are not scorching, though they, too, grow and bloom well in sun and are not particular about the quality of soil around their roots.

A NEW MIXTURE of California poppies has crinkled petals so that the flowers looked like upturned skirts. It's called Ballerina for those dancing petals.

April 23-29

Tree Planting Urged
During Arbor Week

LANSING

Observance of Arbor Week in Michigan this year, April 23-29, is of particular significance since Friday, April 28, will be observed nationally as the 100th anniversary of Arbor Day.

This specific day was conceived and named by J. Sterling Morton in 1872 when he was a member of the Nebraska State Board of Agriculture.

This former governor of Nebraska is of special interest to the people of Michigan because of his early training in the public schools of Monroe and as a newspaper reporter here. He received his college education at Albion College, class of 1850, and at the University of Michigan, graduating in 1854.

In urging the planting of trees during this week Governor Milliken points out that aside from the harvest of wood, fruits and beauty, Michigan's more than 90 species of trees serve a vital function in today's increasingly polluted world as they help combat air pollution by removing carbon dioxide from the air and give off oxygen.

Because Michigan's more populated areas are those most in need of trees, it is to our advantage that this natural asset be enlarged and that preservation, conservation and restoration of trees be considered a major step in continuing the benefits of this heritage, the proclamation states.

He suggests that various programs seeking to cope with the environmental crises facing people such as the nurserymen's Green Survival program are to be encouraged.

MICHIGAN'S FORESTS covering more than half of Michigan's land area have been the basis for great industries throughout history and help make Michigan one of the most beautiful of all states. Celebrating Arbor Week with proper ceremonies and the planting of trees will be a constant reminder of a priceless gift we must preserve for this and future generations, he declared.

As in the past the governor will plant a tree on the State Capitol lawn furnished by the Michigan Association of Nurserymen who as in the past will place a potted evergreen tree on the desk of each legislator.

The Michigan Department of Natural Resources in cooperation with the nurserymen's association has prepared a special pamphlet giving full information for the observance of Arbor week. They may be obtained free from the department's Publication Room, Stevens T. Mason Building, Lansing, Michigan 48926.

The five regional chapters of MAN at Detroit, Lansing, Saginaw, Kalamazoo and Grand Rapids will aid groups with their programs. For information contact MAN Headquarters, P.O. Box 5367, Lansing, Michigan 48956.
