VETERANS OFFICE OF VETERANS' AFFAIRS LANSING

G. I. STUDENTS ELIGIBLE FOR SUBSISTENCE LOANS
Veterans attending Michigan colleges this fall who are faced with a sixty day delay in obtaining federal subsistence checks from the Veterans Administration may obtain a Student Subsistence Loan from the State Office of Veterans' Affairs, Lansing.

These loans are made solely for the purpose of providing the veteran with subsistence during the period between his enrollment and the date of the receipt of his first federal subsistence check.

Eligibility for such loans is confined to veterans, who, at the time of induction, were bona fide residents of this state and who are now engaged in a course of instruction at a school located in the state of Michigan.

The amount of the loan will not exceed \$55.00 for a single veteran, or \$90.00 for a married veteran.

Student Subsistence Loans should be initiated and cleared through the veterans' counselor at the school. In cases where the school does not have this service, the veteran should make application for the loan at the nearest community counseling center, or write to the State Office of Veterans' Affairs, 411 West Michigan, Lansing, Michigan.

WASHINGTON DIGEST

(Continued from Page Two)

The old Roosevelt homestead is a museum now—but the Roosevelts have other dwellings.

They are going for commercial farming, Mrs. R. said. Elliott hadn't been investigating since the senate war investigating committee started looking into the Hughes airplane, and ended looking the other way and blushing. The testimony had a lot to do with the night club—cocktail lounge side of young Roosevelt's activities but nobody could find a hole in his war record. Even his many critics admit that.

Elliott's friends are hearing signs of relief to hear that he is going in for something constructive. War takes a lot of courage and skill, too, but it isn't very constructive. Neither is night life.

"This is a challenge," Mrs. Roosevelt explained in her column, "Which Elliott and I will enjoy." Every farmer knows she's right about the "challenge." They aren't going to try to raise wheat, corn, potatoes, or attempt to keep 14 cows, as Smith was doing when I visited him. They are going to continue raising Christmas trees, a venture which the late President started and seriously pursued for several years. Smith's 140 acres, which were devoted to general farming, are only a fraction of the more than 1,000 acres, much of which is wooded and part of which has been devoted to a scientifically cultivated evergreen crop, which make up the estate.

Mrs. Roosevelt explained that she and her son couldn't afford to keep the estate as a country place, as her mother-in-law had. And she believes land ought to be utilized. Furthermore, she added, there always "seems to be a certain stability about farming."

I noticed that the New York Herald-Tribune made editorial note of Mrs. Roosevelt's plans and mentioned that a lot of acres along the Hudson "were untitled."

It mentioned that Dr. Samuel Bard, a wealthy retired physician, had a place not far from the Roosevelt estate where he carried on valuable experiments which made an important contribution to agriculture. Mrs. Roosevelt hopes to conduct similar experiments.

"If Mrs. Roosevelt," says the Herald-Tribune, "does no more than fasten remembrance on the fact that the land and the industry of farming is that of a renewable world in which seedtime and harvest are still more lasting than dynasties and dictators... the new farming partnership will have done much of value before the first furrows are turned."

I wonder if you feel the way I do. I think, regardless of the color of one's political sentiments, anybody who loves the soil can offer his well-wishes to this venture with the hope that the young man who does so well with his hands in the earth as he did with his plane in the air.

FOREST FIRES ARE NATIONAL TRAGEDIES

It was a coincidence that while I was reminiscing on the subject of the Roosevelts' new adventure in tree-growing, my neighbor in the building across the street presented me with a couple of typewritten pages containing some striking facts about tree destruction. This period of holocausts began

before the ink was dry on bills passed by congress making deep slashes in the interior department's appropriations for fire control. Many of the cuts later were restored, but not in time to save thousands of acres of timber in some areas of America, notably Alaska. "The sawmiller burned in a single year in this country," says my friend's memorandum, "would be sufficient, if converted to building materials, to replace every private house in the cities of New Orleans or Minneapolis."

"If the wood below sawmiller dimensions could be manufactured for paper, it would provide a 35-year subscription to a monthly pocket-size magazine for every man, woman and child in our 142 million population."

In terms of dollars, our annual forest fire loss amounts to 35 million dollars in payrolls lost to woodworkers and three-quarters of a billion dollars worth of wood products. "The tragic part of all this is that 9 out of 10 forest fires could be prevented. Nine out of 10 are traceable to human causes—to incendiaries, causing more than 25 per cent of all forest fires, and to carelessness, to school-burns, railroad, campers and woodworkers who are responsible in the order named."

Well, those are the sentiments of my neighbor, who is trying to establish a "balanced cooperation" among the men who make their money out of trees, one way or another, the people and the birds and the bugs who need to have trees, and the government and others who try to protect and preserve them.

One non-cooperating match tosser can undo a lot of his work.

YOUTH AND PROGRESS GO HAND IN HAND

When the red tail light was broken on one of the DC-6s making its initial flight to Belgrade as one of a fleet of the Sabena airlines, the hostess saved the day and permitted the ship to make a record trans-Atlantic flight. She painted the reflector with her lipstick and there was no delay. That couldn't have happened when I was a boy—girls didn't carry lipstick and airplanes didn't carry tail lights because there were no airplanes.

CPL. MITCHELL GRADUATES FROM AIR CORPS COURSE

Cpl. Wallace J. Mitchell, husband of Mrs. Elsie Mitchell, 27400 Twelve Mile Road, Farmington, this week was graduated from one of the world's greatest educational programs, one of the Air Training Command's airplane mechanics training courses at Keesler Field. The training he received in the mechanics school covered basic airplane and engine mechanic operations. The technical course extended over a period of approximately 16 weeks and included instruction in aircraft electrical systems, engine operation, fuel and oil systems, propellers, structures, instruments and basic inspection. This qualified him for additional specialized training in the maintenance of heavy bombers, cargo planes, jet and military aircraft.

AND FOR LEUKEMIA

Substance present in potato juice can increase life expectancy in acute leukemia, according to Dr. Raphael Isaac, Michael Reese hospital, Chicago. The active substance in the juice is a chemical called "tyrosinase."

Yield Jumped Up
For the entire 50-year period from 1870 to 1939, says a Twentieth Century Fund survey, the yield per acre of corn averaged 25.5 bushels. Use of hybrid seed and other improved practices has resulted in an yield in excess of 85 bushels to the acre.

First Big Change
Electrical equipment for curing forage crops in the barn, other improvements in recent years, was the first major change made in thousands of years in crop drying processes.

THE FINEST TASTING BEER IN AMERICA!

Things to look forward to!
The close of the working day... the restful moments before dinner... and a glass of cool, sparkling E & B to relax and refresh you...

WHAT OTHER FUEL CAN MAKE ALL THESE STATEMENTS?

COAL is ECONOMICAL

Comparative fuel costs tell their own dramatic story. Dollar for dollar, Coal delivers more BTUs (standard unit of heat measure) than any other fuel. You can heat your home more cheaply with Coal... and bank the savings.

COAL is EFFICIENT

When the proper grade and type is used, Coal fires quickly and furnishes even heat in all temperatures and weather conditions. Good Coal and a good heating system mean an end to "hot ceilings and cold floors!"

COAL is SAFE

Coal ignites only when you want it to. Neither low nor necessity forces you to keep a fire-extinguisher near your furnace when you burn coal. It cannot leak nor spill... needs no pipes nor storage tanks that may become defective.

COAL is ADAPTABLE

Coal, unlike other fuels, goes on supplying heat when equipment operation is interrupted... often until equipment is serviced. And you can control coal heat to match weather variations.

COAL is DEPENDABLE

When other fuels were rationed, and homes uncomfortably and unhealthfully cold... coal users were safe and comfortable. A steady supply in your basement, and you can laugh at shortages and transportation breakdowns.

COAL is CONVENIENT

With the wonderful new stokers and automatic heat controls, Coal more than ever brings you a burning heat in cleanliness and freedom from drudgery. Heat of your "furnace tending" is done from your living room with the touch of a finger.

IF YOU ARE AMONG THE FORTUNATE HOME OWNERS WHO BURN COAL,

your local coal merchant is your free home-heating counselor. He will show you how to obtain peak heating efficiency and economy from this most satisfactory of all fuels. He also sponsors a 24-hour heating-plant service, available to you day or night by calling Cherry 4331.
