"That's the Smartest Million Dollars BUICK Ever Spent

WHEN we tell you that every 1952 Buick rides like a million dollars, we're not just slinging slang-we're talking real moneyright-on-the-barrelhead cash.

A million dollars and more were poured into research and testing-design and tools-engineering, production and components—to team up the combination of ride features you'll find on a Buick-and on no other car in the world.

A million dollars and more was the price paid to work out control of end-sway and side-roll on curves - to double check vertical "throw" with shock absorbers and big soft-acting coil springs for all four wheels - to V-brace the torque-tube keel and X-brace the frame to cushion body and engine - and to silk out the whole operation with Dynaflow Drive.*

You may not care how the job was done, or what it cost. But we'll lay you this:

You'regoing to say "thanks a million" to Buick engineers once you get this spirited smoothie under your hands and haunches.

Old familiar roads take on a new smoothness. Gone are the weave and wander, the jitter and jounce that you've felt in lesser cars. You ride with road-hugging assurance and level ease.

All/of which only begins to tell you what really great cars these 1952 Buicks turned out

Never before have style and stamina-comfort and character-power, performance and price been brought together with such satisfying

obvious thing for you to dis come in and them over. How about take ng half an hour off to do that - today?

Sure is irue for '52
