

Practical Nursing School Visited By Future Nurses

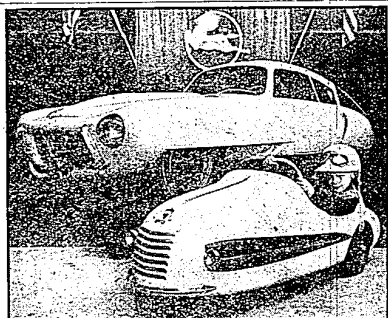

Future Nurses Club attended the School of Practical Nursing in Ann Arbor Tuesday, April 21. The nurses showed the club members many phases and demonstrations of practical nursing.

5:00 p.m. Miss Jacqueline Buck and Miss Helen Polk accompanied the group. Beds of coal — the state's chief mineral resource — can be found under 40% of Wyoming's surface.

The World in Pictures

NEW PRIESTS—Lying prostrate during ceremonies elevating them to the Catholic priesthood, newly ordained priests, including several Americans, are seen in Lateran Basilica in Rome. Cardinal Micaro is officiating.

KID-SIZE CAR—Rolling along in the miniature Luciola is six-year-old Roy Hatchell of Brooklyn, N. Y. He tried out the car at the World Motor Sports Show in New York's Madison Square Garden. Seen in the background is the most expensive auto at the show, a \$30,000 Spanish Pegaso. The Luciola is powered by a 12-volt battery, costs \$495.

LADY AT HER LOOM—Sliding her shuttle across the raceway of her handloom is Mrs. Robert Auxier of Pittsburgh, Pa. She weaves clothes for herself and her husband on the machine. In this picture she is weaving a banner to be used in a Chautauque ceremony.

SOUNDS INTO WORDS—Learning to speak, five-year-old Roy Hatchell of Brooklyn, N. Y., hears his teacher's voice forming words through the earphones clamped on his head. He controls volume of the sound by turning the knobs under his hands. The teacher, Mrs. Reiner, is an instructor at the Firm Desloge Hospital in St. Louis, Mo.

LANGUAGE CLASSES HOLD CONTEST OF POETRY READING

A Spanish and French poetry contest was held on Pan-American Day, April 14, at Farmington High School.

The results of the contest are: Spanish I — Clara James, with Dolores Domes and Shirley Bunnell receiving honorable mention. Spanish II — Sandra DeHaro. French I — Tenore Gildomister, with Carol James, receiving honorable mention. French II — Ann Redner with Nancy Banks receiving honorable mention.

The contestants were judged by students now taking Spanish and French. The winners were selected for knowledge of the poem and accuracy in pronunciation.

The winners will go to Michigan State Normal College in Ypsilanti May 16, to a French and Spanish poetry reading contest. Although it is called a contest at Ypsilanti, no winners will be selected.

WEST POINT PARK NEWS

MISS L. A. AULT
Phone 1416-M

Mrs. Walter Rehner of Mayfield Avenue has been battling pneumonia.

A. D. Ahler from Detroit was visiting his uncle, E. W. Stange, on Mayfield Avenue last Sunday evening.

News from Florida is to the effect that Mr. and Mrs. Joseph Sidelink, former Mayfield Avenue residents, who have been living in a trailer camp near Tampa since last October, are now occupying their own newly-constructed home, also near Tampa.

James Maynard from Norway was calling at the home of his mother-in-law, Mrs. Herman Schult on Shady Side Avenue last Sunday evening.

Howard Middlewood of Farmington Road, has already enjoyed three successful snail fishing trips.

CURTAIN LENGTH IN LIVING ROOM ACCENTS DECOR

In deed of winter a homemaker's thoughts often turn to spring cleaning and refurbishing. If that is the case and you have new curtains in mind, Mary Shipley of the textiles, clothing and related art staff at Michigan State College has some suggestions.

Curtains can help give the right feeling to a particular room, she points out. If your living room, for example, is a formal one, then you need to treat your windows in a very different way from the woman who has casual, informal decor.

Miss Shipley emphasizes that curtain or drapery length is one of the most important factors. There are three possible choices to help carry out the feeling of your room.

The first choice is to have the curtains end just at the window sill or perhaps a quarter of an inch past. This length has some disadvantages, Miss Shipley advises, for the city home where dirt collects on sills. But this short length will give the right expression to an informal room.

Another length for curtains is to the lower edge of the window. This, too, will be good in a casual living room. Miss Shipley recommends this longer curtain, since it doesn't collect dirt or blow in out of the window easily.

COPPER PROCESS WILL RECOVER NEEDED METAL

A new process which could mean the recovery of millions of dollars worth of copper from waste piles at American copper mills has been developed at Michigan State College's Engineering Experiment Station.

Key to the process is a newly-developed coal-tar product which removes a copper-bearing mineral (copper sulfide) from impurities in the process. Standard commercial processes would have to be used to produce the pure copper.

Prof. C. C. DeWitt, director of the experiment station, said that vast waste dumps containing copper sulfide have accumulated for the past 40 years at most copper mills where copper sulfide has been extracted from the ore.

If the process can successfully be applied to commercial use, DeWitt said it can "mean a great deal to our economy—in increased production of a raw material which has important importance in defense and civilian goods production. It also would be another step, he said, in meeting the problem of 'eventually' having to recover low grade and scarce minerals."

Blue Star Mothers

L. MCINTYRE

The Blue Star Mothers of Farmington Chapter 49 held its regular business meeting in the Town Hall on Thursday, April 16, at 1:00 p.m.

The meeting was called to order by president Josephine Hinz and three new members, Frances Billing, Margaret Boyce and Mable Piloni were new members making six new members for the month of April. Every mother of World War II veterans and veterans of the Korean War are eligible for membership in the organization.

Ada Bohlinger was elected to membership in the "Big Dipper" for the "Outstanding Mother of 1952" in her local chapter. The Big Dipper is the fun group of the Blue Star Mothers that sponsors the scholarship fund of the organization.

A very interesting letter was read from Mrs. Grace Ault, who has spent several weeks with her daughter, Mrs. Mueher, in St. Petersburg, Florida. "She wrote of the lovely weather and friendly people she has met and of her visit to the Veterans' Hospital, a task close to the heart of every Blue Star Mother."

Mrs. Mary Lenz and Mrs. Josephine Hinz were appointed as representatives to attend the Civil Defense conference to be held in the Hotel Olds in Lansing on May 6.

The Blue Star Mothers of Metropolitan Detroit received a citation from the D. S. O. for serving 3887 hours working at the Fort Wayne Induction Center during the year 1952. Farmington mothers have served many hours doing their share of work and donating material gifts.

The Mothers will hold a baby shower for the babies of the Korean Gospel Mission in Pusan, Korea, on May 21 in the Town Hall at 1:00 p.m. The Korean Mission is under the direction of Janet Wang. Members are asked to bring some article of baby wear to the May 21 meeting.

Delegates to the Department of Michigan Convention to be held in the Hotel Hancock in Saginaw on June 7, 8, 9, and 10 were Mrs. Josephine Hinz, Mrs. Mary Morris and Mrs. Irene Krueger. Mrs. Berna Werschm were named alternates.

A check for \$111.15 was paid to the "Foster Fund" through Dr. Godwin from the benefit party staged by the Blue Star Mothers on April 7. The committee wishes to thank the following merchants for prizes: Hutton's Hardware, The Gamble Store, Mac's 50 to \$1.00 Store, Robertson's Hardware, Farmington Edison Company, Wurtzsch's 50 to \$5.00 Store. Thanks also to the girls at Clareville High School who did the serving of the luncheon.

The May luncheon and card party will be held in the Town Hall on May 13 at 12:30 p.m. Mrs. Josephine Hinz, Mrs. Margaret Stevenson, and Mrs. Margaret Boyce will be chairmen. The regular business meeting will be held on May 21 at 1:00 p.m. in the Town Hall.

MOISTURE-PROOF PAPER INSULATES CRAWL SPACE

Ever troubled with moisture in the "crawl space" under your house?

Covering the ground with a craft-type moisture-proof paper is one remedy offered by T. J. Brevik, Michigan State College agricultural engineer.

Brevik points out that warm, moist air entering the "crawl space" from the heated areas above condenses when it hits cold surfaces of walls or floor joists. Evaporation and condensation in the same way, he adds.

In some cases, protection may come from insulating the floor below the water pipes and installing good-sized ventilators in the corners below the insulation to let air circulate. In other cases, it may be wise to insulate the walls and circulate warm air through the "crawl space". Using this space as a "return air chamber" for the furnace, for instance, may help. Moisture is carried in the circulating air. If cold surfaces can be warmed to a point above condensation temperatures, moisture trouble can be checked.

Where condensation comes from ground moisture, the best answer is to cover the ground carefully with moisture-proof paper. Craft-type paper or 40- or 50-pound roll roofing can be used.

In 1881, the first pheasants in America arrived from China and were released in Grand Haven, Michigan. Within 50 years the bird became one of the principal upland game bird species of the United States, with a range that extends through most northern states.

Soil Needs Body For Lawn Results

Putting in a new lawn? Proper soil preparation will be your basic consideration.

Soils run all the way from sandy or gravelly to heavy clay types. Sandy or gravelly soil may be infertile and too well drained. If this condition prevails, it will be necessary for you to mix two inches of clay loam into the upper six inches of soil to give it body.

If possible, vegetable material of a fibrous or matted type, such as peat moss, ground-up tree leaves, corn cobs, or woods' litter, should be plowed or harrowed with the clay. If enough of this litter is used, the clay may not be needed.

In addition to the litter and the clay, it will be necessary to use a considerable amount of chemical or animal matter. In the case of a poor type, in this case, it will be wise to use woods' litter to hold the fertilizer in the top soil.

Best results are achieved by mixing the litter and fertilizer before working them in. Forming the main body of the top soil, this compost is made up of alternate layers of litter, a thin layer of top soil, a full sprinkling of fertilizer, and a generous dosage of fertilizer to a settled depth of about four inches, with a flat surface to catch water.

On top of this soil mix, spread a layer of litter or more of fine top soil from farm, garden or meadow to serve as a seed bed for the grass seeds. The loamy soil between sand and clay, if it has been cultivated and used for farming or gardening for some years previously, may be ready to use. However, it might be advisable to add fertilizer and compost, since most garden soils are somewhat worn out.

VEGETABLE TYPES ARE RECOMMENDED FOR MICHIGAN

Many factors must be considered in selecting varieties of vegetables for commercial or home production. Below are some varieties of vegetables which are recommended by the department of horticulture of Michigan State College.

Beans (snap beans): Some varieties which are resistant to mosaic are Top Crop, Rival, Wade and Ranger.

Beans (snap wax): Round pod beans, Max, Kinghorn Special, Puregold.

Cabbage: Yellow-resistant varieties should be grown if the Yellow disease occurs on the land. However, the susceptible varieties are higher yielding and are preferred if no Yellow is present. For an early variety of Yellow-resistant Golden Acre. Yellow-resistant varieties are Wisconsin Golden Acre and Resistant Detroit.

Second early susceptible varieties are Copenhagen, Ferry's Round Dutch, Resistant varieties are Marion Market and Racine Market. For late storage susceptible variety is Hollander.

For additional information on recommended vegetable varieties, write the county agent in Pontiac for the leaflet entitled "Vegetable Varieties for Michigan".

Farm labor will be scarce and higher-priced this summer, warn MSC agricultural economists.

John Clappison Sells Insurance

STRICTLY FRESH

With the steel strike settled, we can probably figure on paying more for that new car which we couldn't afford in the first place.

Two newlyweds who were married on an Italian mountain last week have not had sex yet on their honeymoon—hiking across the Alps. Theirs will be an uphill marriage.

A London optical company reports that it has sold two plane loads of monocles to African warriors.

Two Marines in Korea got nine Red snipers in a week by using a decoy method. One stood in full view while Reds shot at him; the other shot the exposed Reds. Most hunters wish they had a decoy who could "talk" so well.

A Boston doctor says tired businessmen should take one-month vacation twice a year. That'll give them plenty of time to hunt new jobs.

KITCHEN RANGE WILL LIVE LONGER WITH LOVING CARE

Your kitchen range needs a little loving care to live a long, happy life, reminds Evelyn Zwemer, Michigan State College home management specialist.

Your stove has a glass-like finish that is durable but won't stand up under mistreatment. Wash the stove with warm soap and water — but only when the surface is cold, not hot. Miss Zwemer suggests that if food spills on the range while you are cooking the most convenient and safe way to clean it up is with a paper towel and not a damp cloth.

The ounce-of-prevention adage works best when it comes to oven care, the home management specialist believes. Get in the good habit of using large enamel baking dishes so that food cannot overflow. Escaloped potatoes are especially likely to be overdone. Use a generous baking dish. Put a cookie sheet under the pie you are baking.

Aluminum foil lining in the bottom of the oven does make for easy cleaning, but it does interfere a little with the heat in the oven. A dish of ammonia in an oven overnight will loosen dirt and make cleaning a breeze. Process next day. But here's a tip, don't leave plants in the kitchen the night you give your oven the ammonia treatment — plants will around ammonia fumes.

Real work and time saving features are coming in late model kitchen ranges, Miss Zwemer reports. Look for gas stoves with a glass window on the table top that enables you to see oven duct baking in your oven without even stooping or opening the oven door. A new electric range feature is an electric unit which is immersed in a kettle of fat for deep fat frying.

Use a special sewing machine oil for your machines, urge MSC specialists. They point out that residues from some oils often cause trouble after the oil evaporates. The specialists recommend a thorough sewing machine clean-up every year. Soak the dust and lint-laden parts in a solvent like kerosene, brush it out with a tooth brush or do a little scrubbing if necessary to get all the parts spotlessly clean.

Bituminous coal is one of Illinois' principal products, and the state has more than ample reserves of \$2 billion tons.

Insurance Men To Visit Washington For Meeting

Two insurance representatives in the Farmington area, Robert Snyder of 23415 Maple and Keith Kulling of 14134 San Jose in Redford Township will attend a convention of their company in Washington, D. C., April 30 to May 2.

Snyder and Kulling were chosen to attend the meeting on the basis of qualifications set by the company a year ago. While in Washington the two men and their wives will visit the White House and do some sight-seeing and will then proceed to Richmond, Virginia, where they will be company guests for a short time.

The American golden-eye duck is commonly known as the whistler because of the sound made by its wings during flight. It prefers a natural cavity in a tree for a nest site and usually lays from eight to 12 bluish-green eggs. The bird is an expert diver and able to remain under water in some cases for nearly a minute. It is a common migrant of Michigan.

Buttonhole Making Hints Use Of Stiff Material

The buttonhole attachments on sewing machines are a great boon to women who like to do their own sewing — but some women are reporting difficulties with certain kinds of fabrics. Mrs. Josephine Lawver, home demonstration agent, reports that Michigan State College clothing specialists have a few pointers for your buttonhole-making this spring.

Try placing a single thickness of crinoline between the buttonhole attachment and the cloth. Because crinoline is a stiff, open fabric, it gives sufficient body to the fabric for the attachment to make good buttonholes. After the buttonholes are finished this crinoline may be pulled back and cut from around the buttonholes. By putting one side and the ends the crinoline may be pulled out.

If all the crinoline is not removed, it will readily wash out or can be pulled out. In making good buttonholes with sewing machine attachments, it is important to keep the material smooth and to keep the buttonhole on the straight grain of the material.
