### COAL AT WORK

In 1920 it took three pounds of coal to generate one kilowatt hour of electrical energy. Today one pound of coal does the same job and it electricity was being generated now at the low efficiency level of 34 years ago, almost 350,000,000 tons of coal would have been needed to generate 219,000,000 kilowatts produced in 1952. Actually, 116,000,000 tons were used, a new all-time high record.
