

### School Board

(Continued from Page 1A)

1,200 as well as the erection of a steel foundation for a press box, was awarded to the Salfway Steel Scaffolding Company at a bid price of \$10,285. A contract was also awarded to the Keystone Fence Company for 1,400 feet of fencing at a bid price of \$1,573.

The Board approved an agreement with the City of Farmington for connection of the Williams Creek School sewer to the Interceptor system and authorized Superintendent G. V. Harrison to execute the agreement. Approval was also granted for the purchase of furniture and equipment to be installed in the Kendallwood and William Grace Schools as well as equipment for the O. E. Dunekil Junior high school.

## What's cookin'?

Regardless—we're in a stew too—and if yer feelin' full o' pep—and if its cool—and if yuh wanna hot the pot we'll have some boneless stew beef fer 79c a lb. Fer stew yuh need a potato or three so wanna git 10 lbs of California potatoes fer 59c? With a hot meal a cool dessert. Would a quarter or a half or a whole watermelon be enuf? Maybe the Redd's rather have a popsicle and we have a box of 8 fer 39c. Course us big kids gotta have coffee and Lafer Bros.

is 79c a lb. Fer our own special made stuff we'll have our own hams and bacon. If yuh drop around Thursday we'll show 'em to yuh jest comin' outta the smoke house. The hams will be 69c a lb and the hickory smoked bacon 79c a lb. Then we're right back where we left off last week—whole fresh dressed frying chickens fer 89c a lb and Vlasic butter fer 59c a lb. Now since the butter is so cheap wouldcha like to fry just some chicken legs and breasts? They're 69c a lb. With the fried chicken a glass of either Birdseye or Minute Maid lemonade when 2 cans is 29c. Fer pork it'll be the rib end of a pork loin fer 39c a lb and baby spare ribs fer 59c a lb. The beef is U. S. choice round steak fer 89c a lb. Last item—we have a complete line of freezing and canning supplies—can't let the stuff go to waste but it sure is a lot of hard work—aint it???

### CITY INTERCEPTOR SYSTEM READY FOR OPERATION

The new sewer interceptor, connecting the City of Farmington system with the city sewer, is expected to be in complete operation this week-end, Earl Scherffius, City Manager, announced Monday.

The new system, which was used in the city sewer operation last month, has been delayed pending the installation of additional facilities at the request of the State Health Department. The last of these facilities are being installed this week, the City Manager stated.

It was anticipated that the system will be placed in operation Friday or Saturday. Scherffius stated that the major adjustments will probably be required during the first few days of operation.

### Set Meeting

(Continued from Page 1A)

Living on Floral. The vote was 5 to 2 in favor of rejecting the plan, which Brown and Westlake casting the two negative votes.

A letter was received from the Village of Woodcreek Farms requesting a joint meeting with the Board to discuss the transfer of various tax funds which the Village is entitled to since incorporation. It was suggested that the date of the meeting be delayed pending the appointment of a Township Attorney and that the Clerk advise Woodcreek officials that a meeting will be arranged as soon as possible.

Action was taken by the Board declaring its intent to rezone the southeast corner of Middlebelt and Ten Mile Roads from Residential to Commercial. The resolution will be published and turned over to the Zoning Board for study and public hearing. The Board approved a motion fixing the salary of the new dog warden at \$75 per week plus \$25 per week car allowance, to be paid on a month to month basis. Norman Raupp, new dog warden, is working under the County Health Department.

### Obituaries

**William B. Borchart**  
William B. Borchart of 1120 W. Maple Avenue, Plymouth, Mich., passed away July 22, 1957, at the Sessions Hospital.

He was born October 3, 1878. He is survived by his wife Elizabeth, one daughter Helen Spicer of Farmington, sister Elizabeth of Walled Lake, and two grandchildren.

Mr. Borchart and his wife were married August 18, 1904. They resided in a farm on 10 Mile Rd. in Novi until 2 years ago when he retired and moved to Plymouth. He was a member of the First Methodist Church of Plymouth.

Services were held Wednesday July 24, at 2 p.m. at the Caterline Funeral Home in Northville. Rev. Carl Schmitt of Farmington officiated. Interment was in Oakland Hills Memorial Gardens.

When you turn off a turnpike, be sure that you slow down to speeds in keeping with secondary road traffic. This requires a conscious mental effort after you have become accustomed to breezing along at high speeds for sustained periods.

### "Northern Lights" To Be Visible Several Times During The Year

"Northern Lights" visible in Michigan and many other parts of the country on June 30, are likely to be visible again during the rest of the year, according to Dr. J. B. Stokley, associate professor at Michigan State University.

Displays of these lights, known to scientists as the aurora, have long been known to be associated with activity on the Sun, and this varies over a cycle of about 11 years, he pointed out. At present solar activity is at a maximum, and many more auroral displays are likely. As one feature of an active Sun, there are many sun spots, which are vast whirlwinds in the gaseous solar surface, often many times as big as the Earth, he said.

"The cause of the aurora is not fully understood," stated Dr. Stokley. "It is believed that streams of electrified atomic particles are shot at us from the Sun, particularly from the spots. Some enter our atmosphere as they hit atoms of oxygen and nitrogen at heights of 65 miles or more, they cause these gases to glow."

Such particles are affected by the magnetic field of the Earth. Auroras are most frequent in the general region of the magnetic poles, both north and south, he said. In the northern hemisphere they occur most often above a line that runs along the north coast of Alaska, across the Yukon and the northern Territories of Canada, Hudson Bay and Labrador. Then the line goes over the North Atlantic, south of Greenland, and Iceland; it skirts the north tip of Scandinavia and then goes over the Arctic Ocean. Just north of Europe and Siberia. Along this line, he said, the aurora is visible nearly every clear night.

Residents of Michigan and other northern states have considerably more opportunity to see auroral displays than people at similar latitudes in Europe, who are much farther from this line. Southern Michigan has ten times as many auroras as northern Florida, where the frequency is about the same as in southern France, Dr. Stokley pointed out. Along the northern shore of Lake Superior they occur about three times as often as in southern Michigan, at about the same rate as in northern Scotland, he noted.

Auroras have many different forms. A common one, he explained, is a pale green arch, low in the sky. This is really a sheet of glowing gases, about 65 miles high, which curves with the Earth's surface. Seen on edge from a more southerly point, it has the appearance of an arch. Sometimes such arches climb higher into the sky, and they may seem to pulsate. Another form is that of streamers, like searchlight beams, or of luminous curtains, which may appear to wave as if in the wind.

Many different colors have been observed in the aurora, but a greenish yellow predominates, said Dr. Stokley. Reds, blues and violets may also occur.

One of the major areas of study of the International Geophysical

Year, now engaging the attention of thousands of scientists in many parts of the world, is concerned with the aurora and similar effects, he added. When fully analyzed, these observations, from both Arctic and Antarctic observing posts, will doubtless give the answers to many puzzles now presented by the aurora, he believes. It was mainly because these effects are now at maximum, along with solar activity, he said, that the period from July 1, 1957 to Dec. 31, 1958, was chosen for the Geophysical Year.

Dr. Stokley teaches science writing in the MSU School of Journalism. He is the author of several books, on astronomy, electronics and atomic energy, and was formerly director of the Fels Planetarium in Philadelphia.

### What's Happening In Your Township

By FRANK STEPHENSON

ED. NOTE: This is the first publication of a special column written by Township Supervisor Frank Stephenson, designed to keep Township residents up-to-date on the activities being conducted by Township Officials. It is to be non-political in nature and will deal strictly with problems and activities of interest and concern to Township residents.

A program of weed control has been started in the Township. This will be good news to Hay Fever sufferers. Two machines are at work on local roads while the primary roads are being taken care of by the Oakland County Road Commission. Many of our local roads and drains are badly overgrown with various weeds, presenting an unsightly appearance as well as causing troublesome obstructions.

Considerable improvement is noted throughout the Township since Officer Earl Teeple has been appointed Sanitary Inspector and Assistant Health Officer. Ninety-five percent of the citizens who were in violation, cooperated wholeheartedly. The remainder are in varying stages of cleaning up. Only one court case has developed thus far throughout the whole Township as a result of this cleanup drive.

Water is badly needed for the "dry area" and sanitary sewers are needed throughout the whole Township. We are working over time on both problems. Be a good neighbor and help circulate and sign the water petitions. NOW!

A large number of citizens do not realize that the Township has a rubbish pick-up service and are paying for private collections. For the pick-up date in your area call Mrs. Davison at GR. 4-6115.

I earnestly solicit your support of the Little League baseball program.

### Sportswear Look Style For Summer

Summer fashions for 1957 spotlight the restoration of the bona fide sportswear look — the easy line, long waisted and pleated skirts, heavy sweater jackets, casual sleeveless dresses.

Fashion analysts headline controlled fullness with over-all look of slimmness. Pleats, large or tiny, usually hang straight and fall close to the body. Brass buttons are another identification.

The sheath remains, largely for town wear, with a fresh approach apparent in back-slated panels and fishtail effects. Long and lean peg pants combined with deep center inverted pleats, also continue to be the fashion of the silhouette for summer. New fashion in summer town dresses appears in low waistline treatments, unies and the use of silk. Large sleeves, introduced this past season, are continued for summer. Newest are huge puffs and deep flounces, plus various lantern types.

The suitability to many purposes of summer dress and sweater ensembles keeps costumes in the prestige forefront for town and country wear. Sweaters have a jacket quality in either waist-length or box buttonless styles or in longer nipped-in designs. Favored are "cropped," boxy jackets. In other costume matching capeslets and boleros take bare-top sundress sheaths easily into town.

Twelve Navy ships steamed 300,000 miles during Antarctic Operation Deep Freeze Two.

## The Handyman's NOTEBOOK

by: BAYARD TUPPER  
HANDYMAN

If you're a typical handyman around the house, you're probably spent a good many happy hours, by now, on projects intended to make life easier and more pleasant for other members of the family.

Now how about doing something for yourself? For instance, it occurred to me the other day that the arrival of mid-summer weather will mean plenty of gardening and lawn-mowing for the man of the house.

And if you really get a kick out of carpentry and other do-it-yourself ventures, you may have some of the time you have to spend on some of the less creative gardening jobs and lawn care. Especially such unnecessary labor as lifting the lawn mower in and out of the basement, or wrestling it out of an awkward corner of the garage.

Either way, you've got an annoying and unnecessary problem, and the happy solution is some additional storage space for all your garden tools. The simplest thing would be some built-in compartments and racks right inside the garage, if there's plenty of room there.

Otherwise, why not consider a small addition to the garage or to some part of the house itself, depending on whatever seems the handiest place?

Just by sheer coincidence, we happen to have several plans for outdoor storage, plus all the right materials for such a job. Why not come in and see us soon, and we'll talk about it for a while, if you like!

Next Week: Glass cutting made easy.

### Summer Care Of Baby Tips

Hot weather makes it necessary to give special care and attention to the health and comfort of babies. Dr. Joseph G. Molner, commissioner of health, reminds parents:

The first year of life always has been and is today the most hazardous even though great progress in saving babies lives has been made during the last 25 years. Diseases in younger children were the third leading cause of death in this area.

Young babies are very susceptible to diseases. Anyone who has a cold or a cold or a cold or a cold should not take care of the baby. At the first sign of a cold or diarrhea, the baby should be seen by his physician. See that he is protected against diphtheria, whooping cough and tetanus beginning at three months. Polio inoculation may be started at three months, but should not be later than the first birthday.

Dr. Molner suggests that on warm days the baby will be more comfortable if he is offered bottles of milk. Between feedings when he is awake. Whenever preparing food for the baby, use scrupulous cleanliness and care. Milk, whether in a formula or a bottle, should be refrigerated until it is used. Keep all food in clean and away from flies.

Although being outdoors is good for the baby, avoid unnecessary exposure to the direct sunrays and heat. The best time for short periods of exposure to the sun is before ten and after three o'clock. On hot days keep the baby cool. The baby should be dressed lightly in sleeveless cotton shirt and diaper. A diaper only may be just the right amount of clothing for the baby. Clothing should be loose, absorbent and porous. If the temperature drops suddenly, be sure extra clothing is added so the baby does not become chilled.

### Damp Weather Brings Hungry Plant Lice

In damp, cool weather the garden is in danger from tiny multicolored villains called aphids or plant lice, according to J.R. Hoffmann of the department of entomology at Michigan State University.

They are about one-eighth inch long, soft-bodied and feed on almost all kinds of plants by sucking out the juices.

They come in yellow, green, red, brown, black or mixed colors. Most are females and reproduce at the rate of 10 or more per day. They are adaptable, too, if things get crowded they grow wings and move on to greener gardens.

They feed mostly on the tender growing tips of plants and in the undersides of the younger leaves.

They spread virus diseases and excrete high sugar content honeydew which draws ants and flies, and grows a black-sooty mold which sticks to the plant.

### Board Picks

(Continued from Page 2B)

Mrs. Avery stated there was nothing personal in her vote and re-emphasized that in her opinion the Township can not afford two attorneys.

Following a brief discussion, Mrs. Avery moved that Arthur L. Robbins be appointed as Township Attorney at a salary of \$200 per month. Robbins, who has offices in the Cadillac Tower, Detroit, has had considerable experience in municipal law having served with the Wayne County Prosecutor's office and working with various Township governments.

### SET ATTENDANCE POLICY IN SCHOOL TRANSFER AREAS

Farmington school officials announced this week that a firm policy has been established by the Board of Education regarding school attendance of children living on property transferred to other school districts.

It shall be the policy of the Farmington School Board to permit those children residing in homes on property transferred to other school districts to continue in attendance at Farmington at the prevailing tuition rate as established by the Board. Any change in residence outside the school district or attendance at other schools, private or public shall abrogate the above policy.

This applies primarily to property in the northwest section of the Township which was recently transferred to the Walled Lake School District. It would also apply to any additional property which might be so transferred at a later date.

"Yankoo" comes from the Dutch word "Yanku" meaning to snarl.

### Open Registration For Blood Bank

Registration of blood donors is now underway in the Farmington area for the visit of the Red Cross Mobile Blood Bank scheduled for Tuesday, August 27.

The blood bank is to be held at the Farmington Junior high school building on Thomas Street and is sponsored by the Town Club of Farmington. Volunteer workers are now making calls on homes in some areas and other contacts will be made in the next few weeks. Appointments may be obtained between the hours of 3:00 p.m. and 4:45 p.m. as well as from 6:00 p.m. to 9:00 p.m.

Blood is urgently needed to replenish the supply which is maintained for the use of Farmington area residents. Blood requests may be made by calling either GR. 4-5411 or GR. 4-6225.

Noah Webster began writing the dictionary in 1809 and finished in 1828.
