Bread Without Flour.

In France bread is being made without flour in a machine that transforms the wheat directly into dough. The wheat is prepared by a thorough washing, after which operation about a pine of tepid water to a pound of grain is added, the whole mixture being allowed to stand gome six hours when the grains of wheat have swollen to twice their usual size. The mixture is then treated with yeast and salt and poured in o the machine where simultaneously the envelope and the body of the grain is crushed, ymaking a homogeneous mixture forming a smooth paste.

The average age of cital is fifteen years, of squireles seven or eight years, of rabbits seven, hear a swell twenty, a fox fourteen to sixteen. Lions are comparatively long lived, instances havin been recorded where they reached the age of seventy years.—Tit-Bits.

# CUT OUT EXTRA WORK

ELIMINATION OF UNNECESSAR MOTIONS IS ONE WAY.

Saving of Energy, Not to Speak of Added Comfort, is Strong Factor In Favor of Modern House-hold Methods.

It has been figured out in schools of domestic science that the average method of shelling peas takes about five motions to each pod, whereas no more than three motions are necessary.

tacle, toss the pod to one side and repeat.

The old-fashloned method has generally been to but the dish of unshelled peas in front of you, leave the recoptacle at the right and the one for the pods at the left. This necessitates beening the body, turning the head and making all sorts of uncessary motions between the three dishes, resulting in loss of goodweeners y and many good minutes of time wasted.

sishes, resulting in loss of good-eners are and many good minutes of time wasted.

Dustpains are made today with long handles. It would be just as absurd to sweep the floor with a whisk broom as it would be to use a short handled dustpan. In using the old-fashioned dust pans the sweeper has to stoop many times to get up all the dirt, making it twice as hard.

The broom is very cumbersome to handle while stooping, the back is strained, the table is close to the our healthy dust and everything is water and erect. The dirt cause is the company of the same than the stooping of the same than the same holds good in washing dishes. Many women put the drainer on the left of the dishpan, necessitating the wasted motion of reaching across the pan to place the washed dishes to drain.

The natural motion is simply to pass the washed dishes to the right.
