

COMMUNITY PROTECTION

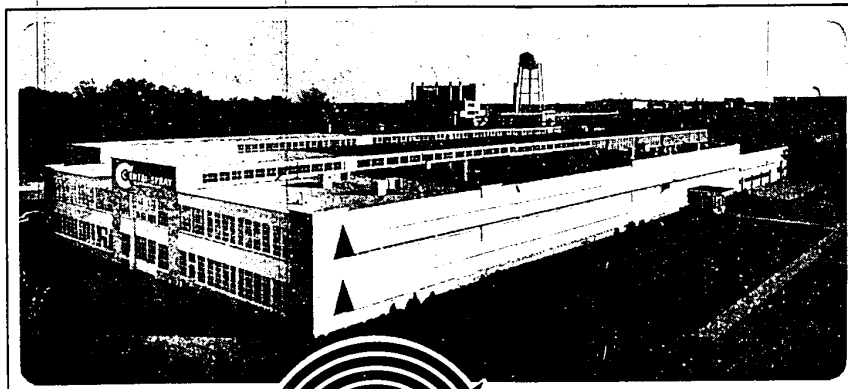

IS EVERYONE'S CIVIC DUTY

COMMUNITY PROTECTION what does this mean to you . . . as an individual . . . as a corporate official . . . as a business owner or a public facility administrator . . . It is Everyone's Civic Duty to do what he can to help and improve his community. At Centri-Spray Corporation, Community Protection means Air Pollution Control and Water Pollution Control. The Centri-Spray engineering and development staff are constantly seeking new methods of Air and Water Pollution Control, which will allow manufacturing processes to return pure, uncontaminated air to the atmosphere and prevent the release of undesirable waste materials to our lakes and streams. Water and Air are Every Community's most valuable natural resources, yet each day increased, uncontrolled, industrial and public use of these resources result in greater

quantities of pollutants released to contaminate the air we breathe and the water we drink. Scientific studies are tracing many respiratory conditions to breathing of polluted air, also some industrial by-products and domestic materials in daily use are producing chemical compounds in our drinking water whose long term effects on health are questionable.

These conditions must be controlled for every Community's Welfare and Protection, and they can be controlled with proper application of Centri-Spray Dust and Chemical Fume Collecting Systems for specific industrial processes, or Installation of Centri-Spray Liquid Recovery Equipment and Water Pollution Control Systems.
