#### On The Lawn

By Larry Lawrence

I get more and more letters about sod. Where can I get it? Is it hard to lay? How much does it cost? There's no doubt that this interest in buying "instant" lawn has increased tremendously just in the past two or three years.

The availability of sod varies a great deal. In places close to commercial sod farms it is sold by the yard at most garden centers and even by the big stores. Or you can call a nursery and have them deliver and install a whole lawn. In other parts of the country it may still be hard to come by. But the business is expanding rapidly. It is so easy to lay? Yes, you can easily carpet or repair a small area yourself. Doing a whole lawn at once might well call for some assistance. Prices don't vary too much. But since you're making an investment that might last a lifetime, you should judge by the quality of the turf, not by the price.

Much in demand is the new Windsor sod, not only for its rich color but because of its resistance to heat and drought and disease. You can find out if it is available in your neighborhood by writing to Scott's in Marysville, O. These are the people who developed it from a single patch discovered growing wild 17 years ago.

### Building? REMODELING?

It will pay you to consider the more efficient methods and the higher quality possible when you use the service of an experienced General Contractor.

### Give Lawn Good Start In Spring

Without proper preparation and care in the Spring, your lawn can deteriorate rapidly after what looks like a good start.

In early Spring rake your lawn vigorously and apply fertilizer or modern combinations of crabgrass control and fertilizers. Now established grass with a sharp-bladed mower to about two inches in height. Then apply, if needed, broad-leaved weed control with fertilizer and insect control with fertilizer.

Grass food and crabgrass and insect control with fertilizer are used by professional turf grass growers.

Good lawns grow only on a fertile soil. This is the trade secret of professional turfmen who know that rapidly growing Spring grass needs plenty of nourishment. Use fertilizers containing, not only organic nitrogen, but also phosphorus and other nutrients that build up the fertility of your soil and, at the same time, give increasingly better turf.
