

**INTRODUCING
Burroughs E 6000 Series
Electronic Accounting System**

**A powerful new tool
for more effective management control.**

Burroughs E 6000 Series offers a practical solution for the many business managers whose needs are "in between."

- Managers who need vital information faster than conventional accounting systems can provide.
- Managers who need the power of electronics and the applicational practicality of an accounting machine.
- Managers who need to supplement an existing EDP system.

Burroughs responds to these needs with a powerful new management tool . . . The E 6000 Series.

It is the latest and largest in our expanded E Series family. And features internal programing, a 400-word electronic memory, magnetic striped ledger records, and high-speed processing power.

It's modular, too. Plug-in peripheral units, for current or future requirements, include a new high-speed line printer, punched card input, automatic magnetic striped

ledger reader, and punched tape or card output.

In short, the E 6000 has the versatility to serve you as a single or multiple job accounting system . . . a complete accounting department . . . or a satellite to a larger EDP system.

For details, call our local office or write Burroughs Corporation, Detroit, Michigan 48232.

The Burroughs E 6000 Electronic Accounting System is the latest development of our Plymouth, Michigan, plant.
