The Informer**...MAKES YOU A BETTER COOK!**

Here's an "informer" that not only gives you the facts but does something about it! How does it work? Simple. Into the center of the meat you put a thermostatic probe, one end of which is plugged into the oven while the other goes into the meat and turns the indicator to the exact degree of doneness you want. When the meat probe gets the right "inside" information, it signals you—the automatically and instantly shuts the oven off. Takes all the anxious-guesswork out of roasting.
