Start Control To Curb Lawn Weeds

While your lawn is getting a good start, don't let weeds do the same thing, advises Dr. B. H. Grigsby, weed control specialist at Michigan State College. He advises spraying lawns with 2, 4-D for weed control.

When the weather is generally warm is a good time to make a thorough application of the spray. Young weed seedlings will be susceptible to the spray.

Crab grass will not be killed by 2, 4-D, Dr. Grigsby points out. Following manufacturers' directions, avoiding spray drift into shrubbery and flowering plants, thoroughly washing the sprayer and hose after use, and not spraying seedlings of young grass.

The keynote to success with gardening is to keep the garden looking natural. A little trimming can make the simplest dish more enticing and appetite appealing.

ADVISE CORRECT CARE FOR TIN COOKING PANS

Treat your tin cooking utensils well if you want them to last and be of service, advises Marjorie Knoll of the Michigan State College school of home economics. Tin pans have an iron or steel base with only a thin coating of tin. Lightweight tin utensils buckle and dent easily unless handled carefully. Though the tin does not rust, the steel base rusts when the tin coating wears off or is scratched through. The tin can be only slightly porous and allows moisture to penetrate to the steel base.

Dipped utensils conduct heat rapidly but do not hold it well, the home economist points out. When new, they are light in color and baked products do not brown very well. When the surface becomes darkened from use, heat is absorbed more rapidly and products turn out with a darker brown color.

If a tin utensil darkens in spots, heat is being absorbed unevenly and food is apt to stick and burn. Discoloration, however, is not injurious to health. If you have food particles stuck tightly to tin, soak the pan for a time or boil a little soda water in the pan. Do not run the risk of scratching off the tin coating.

POWER- PACKED

-and then some!

THERE are a lot of reasons you can expect a new GMC to keep hauling a lot longer than any other truck you can buy.

First is the fact of horsepower. Whether it's a gasoline-powered 1/2- to 2-tonner with horsepower unbeaten in its class, or one of the new heavy-duty Diesels—you can't beat a GMC for "go!"

But the extra value you find in these great trucks doesn't end at the power plant.

There's the smooth GMC Synchron-Mesh Transmission linked to a sharp-shooting drive line, pouring every ounce of power back to the rugged rear axle. And the solid way horsepower becomes wheel-action—you know there's extra depth of truck performance engineered right down through a GMC's broad-shouldered frame!

And standing guard over these long-time trucks are husky brakes with more area than most—the surest, easiest steering ever devised to direct a payload home—all controlled from a spacious "Six-Footer" Cab that's Weathersealed for a lifetime.

GMC's come in the widest range of engine-body-chassis combinations to fit any trucking need. The prices? No better buy anywhere! Come see for yourself.
