Marks of Sincerity

THE more you know about the way this car is built, the more you will be impressed with its value. As a few examples of our way of doing things, we cite to your attention the fact that all wiring is housed in waterproof, rustless, flexible conduits—junction boxes between the body and the chassis—top pressed steel housing for the speedometer driving gears—the three-piece steel body—the deep section frame—the suspension of the springs beneath the frame, so that there is no overhang—the ball-and-socket joint by which the rear spring is attached to the rear axle—the mounting of the headlights on the front fender apron, so as to make easy adjustment and focus. And so we might go from "stem to stern," pointing out superiorities not generally found in cars of this price. But when it is all boiled down to its simplest terms, you will find the performance of this car the source not only of economy, but of great pleasure on its one-thousandth mile. It might well be called "The 100,000 Mile Car." That's the test. Proofs, not promises. May we send you our catalog, which illustrates many of these interesting features?
