TIME TO PRUNE APPLE TREES

Early Spring is Recommended—So vere Pruning Not Necessary— Do the Work Gradually

Do the Work Gradually.

Early spring is the best time to prune apple trees. More and more attention is being given to the pruning of young and old trees in order that they may be able to support large loads of truit. Yet too many trees have been neglected and now took like brush heaps instead of truit trees. Neglected trees should have all dead and interlocking branches removed this year. Next year a few more needless branches should be taken out and some of the others shouted. The following year other should not cut out. In this way here should not into good form gradually.

Caused by Disease of the Kidneys
The close connection between the heart and the kidneys is well known nowadays. When kidneys are diseased, arterial tension is increased and the heart functions are attacked. When the kidneys no longer pour forth waste, uremic poisoning occurs and the person dies, and the cause is often given ag heart disease, or disease of brain or lungs.
