

A kid with leukemia can die from a cold.

Leukemia is a disease of the blood-forming tissues. It keeps the body from producing the necessary amounts of normal white blood cells to fight infection.

An infection that means a day in bed for a normal child is a threat to the life of a child with leukemia.

Today research has made enormous progress. At one time, leukemia victims lived only a few months. Now, in some cases, we can prolong their lives a few years. That's good. But not good enough.

Even though we're closer to a cure, leukemia is still the major cause of disease and death in kids between the ages of 3 and 14.

We want to save the life of every leukemia victim.

We can't do it without a healthy contribution from you.

We want to wipe out cancer in your lifetime. Give to the American Cancer Society.
