CLEAN-UP
SYSTEM
 no. **3**

The answer for the man who is looking for the most comfortable way to clean-up.

Hook it behind a riding mower or tractor and give your lawn a clean sweep. You can adjust the brushes through 5 different settings to suit all kinds of terrain, sidewalks and driveways.

The over-sized 9 cubic foot hopper settles the debris as you drive, packing it tight for a better fill and easier emptying. That means you ride longer and empty less often, so the job gets done quicker — the simpler, the better. The hinging action on the hamper means you get a complete empty with a single flip over.
