Energy woes 'our fault'

"AS A REALLT, we are importing more than 40 per cert of our oil today, up from 20 per cert in 1970. Natural gas production flow dropped almost 12 per cert in the last two yars. These two facts supply 72 per sure of the nations a todal corege men of the control of supplies. As the control of supplies control of control of

did policies that win anomaladate resources that aim nost important step this concluding the step that seems and take is the remand of well more controls on crude oil and new light supplies. The source these concernment of the source we will start the services we may we

ter than any scheme fil central planning or control.

Mang that since the 1973 oil embargo, the ration's energy policy has been con-cerned primarily with energy con-servation, the GM executive said con-servation should be encouraged because it will fully how time in which to develop new demostre sources.

new demastic sources?

DENPITE A CONTINUAL toghtering of crisisson standards, GM has been able to produce cars showing better than a 10 produce cars showing better than a 10 per cell toghter demastic continuation and 40 per cell better than a 10 flower of the continuation of the continuation of the improvements would have been even greater. be said, predicting With some relief on the statutory emission requirements. I'm confident that Gineral Mears can achieve the 20 miles per cell in average that will be required in 100.

Larring to undertrail energy, Metal cited.
