

Check These Tips Before Refinishing Your Floor

FLOOR FINISHING AND MAINTENANCE
VINYL (gum) and VINYL ASBESTOS TILE
 Pure vinyl is the most durable of all resilient-type flooring and will not absorb oil, grease, or dirt and requires minimum care. Vinyl asbestos contains moisture-resistant asbestos and is somewhat less expensive than pure vinyl.
NEW FLOOR CARE:
 For the first two weeks dry mop only so that adhesives have proper time to dry. Then, follow these steps:
 1. Sweep or dry mop entire floor area removing all surface dirt.
 2. Mop floor with floor cleaner solution.
 3. Rinse thoroughly with clear water...allow floor to dry.
 4. Apply very thin coat of liquid wax...allow floor to dry.
 5. Buff with electric floor polisher.

REJUVENATING OLD FLOORS:
 Vinyl will not resist yellowing or discoloring with age due to use of any low quality floor waxes. When this has happened, follow these steps:
 1. Apply wax stripper. For excessive discoloration agitate with fine steel wool.
 2. Let stand 3 to 5 minutes. Then agitate with floor machine and steel wool or synthesis pad. Remove...rinse thoroughly...allow floor to dry.
 3. Apply thin coat of liquid wax. Allow to dry. (Two thin coats are better than one heavy coat of wax.)

RUBBER TILE and ASPHALT TILE
 Rubber tile flooring is widely used in new homes where traditional linoleum and hardwood used to appear, is more resilient than conventional moisture resilient asbestos and is the least expensive composition flooring.
NEW FLOOR CARE:
 For the first two weeks dry mop only so that adhesives have proper time to dry...Then follow these steps:
 1. Sweep or dry mop entire floor area removing all surface dirt.
 2. Mop floor with floor cleaner solution.
 3. Rinse thoroughly with clear water...allow floor to dry.
 4. Apply very thin coat of liquid wax...allow to dry.
 5. Buff with electric floor polisher.

REJUVENATING OLD FLOORS:
 Rubber tile and asphalt tile are resistant to most household liquids as well as denting. They will not, however, resist discoloration or yellowing caused by any low quality floor waxes. When this has happened, follow these steps:
 1. Apply wax stripper. For excessive discoloration apply with fine steel wool.
 2. Let stand 3 to 5 minutes. Then agitate with floor machine and steel wool or synthesis pad. Remove...rinse thoroughly...allow floor to dry.
 3. Apply thin coat of liquid wax. Allow to dry. (Two thin coats are better than one heavy coat of wax.)
 4. Buff with an electric floor polisher.

REJUVENATING OLD FLOORS:
 Interior liquid waxes cause a build-up of discoloration. If linoleum is discolored:
 1. Use wax stripper.
 2. Let stand 3 to 5 minutes. Then agitate with floor machine and steel wool of synthesis pad. Remove...rinse thoroughly...allow floor to dry.
 3. Apply thin coat of clear paste wax. (For extremely excellent results it is recommended an initial coat be clear paste wax to act as a base to a second coat of liquid wax.)
 4. Buff with an electric floor polisher.

REJUVENATING OLD FLOORS:
 Interior liquid waxes cause a build-up of discoloration. If linoleum is discolored:
 1. Use wax stripper.
 2. Let stand 3 to 5 minutes. Then agitate with floor machine and steel wool of synthesis pad. Remove...rinse thoroughly...allow floor to dry.
 3. Apply thin coat of clear paste wax. (For extremely excellent results it is recommended an initial coat be clear paste wax to act as a base to a second coat of liquid wax.)
 4. Buff with an electric floor polisher.

SLATE-FLAGSTONE CARE OF NEW SLATE FLOORS:
 1. Be sure loose dirt and debris is removed.
 2. Scrub slate with mild solution of muriatic acid. This will remove excess mortar. Rinse thoroughly with clear water. Allow to dry.
 3. Apply sealer making sure that the surface is evenly coated. Allow 2 hours for drying.
 4. Apply a thin coat of slate and flagstone paste wax.
 5. Buff thoroughly.
 Note: If slate is outside, apply 2 coats of sealer. Do not apply any wax on outside areas.

LINOLEUM
 Linoleum has been used improperly to describe most floor coverings used in kitchens and bathrooms. This section deals with actual linoleum which is made by rolling or pressing on to canvas or burlap a large combination of gums, linseed oil, cork dust, wood, flour, and pigments.
NEW FLOOR CARE:
 For the first ten days dry mop floors only. Do not use water so that adhesives have proper time to dry. Then, follow these steps:
 1. Sweep or dry mop entire floor removing all surface dirt.
 2. Mop floor with floor cleaner solution.
 3. Rinse thoroughly with clear water...allow floor to dry.
 4. Apply very thin coat of liquid wax...allow to dry.
 5. Buff with electric floor polisher.

CORK
 One of the most luxurious floor coverings, cork is generally installed in areas not subject to hard wear. It does not resist dirt, water or grease as well as other floors, but is resilient and quiet.
NEW FLOOR CARE:
 During the first ten days of installation, sweep only. Then, to remove initial dullness:
 1. Mop with floor cleaner. Avoid excessive use of water. For best results work in four to six foot areas, mopping and drying your work.
 2. When floor is completely dry apply one coat of clear paste wax.
 3. Buff with electric polisher. Never use steel or lambwool pads on any cork surface.
 4. For higher gloss repeat steps 2 and 3.

REJUVENATING CORK FLOORS
 Porous cork absorbs dirt rapidly. To avoid frequent scrubbing use only the highest quality paste wax. When floors become too soiled and abused:
 1. Apply wax stripper.
 2. Let stand for 3 minutes. Then agitate with floor machine and steel wool or synthesis pad. Remove...rinse thoroughly...allow to dry.
 3. Apply a thin coat of clear paste wax.
 4. Buff with an electric floor polisher. Repeat steps 3 and 4 if higher gloss is desired.
 Note: If cork is extremely worn, faded or discolored, Indian sand will restore color as it waxes. Buff thoroughly.
