NELLIE JAY AND HER SIX SYNCOPATING JAY BIRDS

A Bright Snappy Coterie of Classy Girls, in Melodious and Terpsichorean Pastitties SINGING—DANCING—MUSIC

Coming Sunday, May 11 "SCARAMOUCHE" with Raymond Novarro, Alice Terry, Lewis Stone—Greater than the Book—

Rope of Human Hair
Egg fathers of St. Kilda, a Scotch island in the Atlantic, consider themselves rich if their prospective brides can give them a rope of human hair. The ropes vary in length, really good one is 40 or 50 feet, being especially prized. To manufacture such a rope is the work of years, but the St. Kildan girl saves her hair combing religiously.

Thin Platinum Wire
Platinum wire used in certain optical and electrical instruments is drawn to a fineness of less than one two-hundredths of an inch in diameter.

Give Cheerfully
We should give as we would receive, cheerfully, quickly and without hesitation; for there is no grace in a benefit that sticks to the fingers.—Seneca.

CHARITY PATIENT LEFT FORTUNE

Kin of Pair He "Stood Up" for Gets Wealth.

SIZE OF ESTATE SURPRISES

Three-quarters of a century ago in Mainz, Germany, Louis T. Lehmeyer "stood up" as best man at the wedding of his closest friend. Recently he died in Metropolitan hospital on Welfare Island, New York, a charity patient, and his estate, which included the aged bachelor, who had lived alone on the top floor of the brown-stone front house he owned, 305 East Fifty-fifth street, passed in an unbelieved when the lawyer left a fortune to charity and another fortune to a girl of twenty-one.

The girl, Miss Elizabeth Rosalie Wurthmann, a teacher in Public School No. 6 West New York, N. Y., was still planning herself to marry, she sudden wealth from her fairy grand-father wasn't all a dream. Surprised at Size of Fortune.

For it was the parents of Miss Wurthmann's mother, Mrs. Charles F. Wurthmann, 23 Reservoir, Jersey City, to whom Lehmeyer befriended at their matrimonial banquets 75 years ago, and this, the girl believes, is why he chose her as his chief beneficiary. Mrs. Wurthmann and the girl said Mr. Lehmeyer had been a friend of the family since his childhood, and they expected he would remember them at his death. But they were amazed at the size of his fortune as any of his neighbors.

"We visited Mr. Lehmeyer frequently," Mrs. Wurthmann said, "and had to have him taken to a private hospital when I found a postcard had sent him to Welfare Island in an ambulance. The doctors refused to let him be moved and that is the only reason he died there."

Miss Wurthmann is a 1923 graduate of Montclair Normal school. She intends to keep on teaching for the present. Her life ambition, she says, is to use her wealth to help the poor to put plans of this sort into execution until next summer, and she means to "see America first."

"I hate to wash dishes," she said, "but I intend to maintain the home of my own that I have planned myself. But somebody else can do the housework."

She likes to dabble with water colors, she said, and to play the piano and the ukulele. She is attractive, blonde, 5 feet 0 inches tall and weighs 132 pounds. Her father is a bookkeeper for John C. Mehl, 123 Webster avenue, Jersey City.

Miss Wurthmann was made Lehmeyer's residuary legatee, besides having \$15,000 left in trust for her until she is thirty-five.

RADIO "FADING" EXPLAINED

Tests Show Relation to Surface of Air Sixty Miles Above Earth. Variation in the conducting surface of the air about sixty miles above the earth probably causes the phenomenon known as "fading" in radio transmission, the bureau of standards announced at Washington. Scientists have been working several years to find the reason why concerts, speeches and the like broadcast through the air grow stronger and weaker to the listener. The bureau tells of tests carried on by it and the American Radio Relay league during 1920 and 1921. Its statement says:

"In these tests from five to ten radio stations transmitted signals in succession on certain nights, according to prearranged schedules. The signals were received simultaneously by about 100 receiving stations whose operators were provided with forms for recording the variations in the intensity of the signals as received. The general result of these tests substantiates the theory that the sources or causes of fading are intimately associated with the conditions at the heaviest surface, which is a conducting surface some sixty miles above the earth.

"Daytime transmission is largely carried on by means of waves moving along the ground, while night transmission, especially for great distances and short waves, is by means of waves transmitted along the heaviest surface. Waves at night are thus free from the absorption encountered in the daytime, but are subject to great variations caused by irregularities of the heaviest air at or near the heaviest surface. These variations, probably account for fading."

WINE BLOWS UP AT SEA

War Explosives Are Still a Menace to Ships. Mines scattered over the North sea during the war continue to be washed up along the Norwegian coast and, although they have been active for four or five years, most of them are active. One mine exploded recently near the Torshovskjer lighthouse and threw a ton of water 140 feet into the air, the explosion being heard for many miles.

Fewer Youths in Germany, According to the German Teachers' Journal of Berlin, the number of persons in Germany under fifteen years of age sank from 45 per cent in 1910 to 29 per cent in 1920.

HEFFRON—McPHERSON

At 4 o'clock Wednesday afternoon Miss Jessie McPherson of Detroit, and Dr. Howard Hanson Heffron of Adrian, were united in marriage at the home of Mr. and Mrs. Edgar S. Pierce in Farmington; Rev. William B. Campbell of the Church of Christ of Detroit, officiating.

The bride, gowned in a traveling suit, was attended by her sister Mrs. Edgar Pierce. Dr. Harold Heffron, brother of the groom, acted as best man.

Miss Patricia Pierce and Master Charles Heffron were flower bearers. The house was lovely in decorations of spring flowers, daffodils and daisies.

Guests from away were Mr. J. R. Lamb of Toronto, Canada; Mr. and Mrs. William West of Leamington, Ontario; the groom's parents Dr. and Mrs. H. B. Heffron of Adrian.

They left the same evening for a short wedding trip.

WHY WE CAN AFFORD A CAR

The average wealth of every person in the United States on Dec. 31, 1922, was \$2,192, according to the Department of Commerce, which has just announced results of its latest decennial survey.

To Charles D. Hastings, president of General Motors, the report of the Department of Commerce, which has just announced results of its latest decennial survey, is a revelation. It shows that the average American family can afford to own a motor car, says Mr. Hastings. "Per capita wealth increased 49.6 per cent in the ten years since the Dec. 31, 1912 survey was made, when it was \$1,350. The difference—nearly \$4,300 for a family of four—is more than sufficient to enable the head of a household to purchase and maintain a motor car at all times."

"While the Department pointed out that the huge increase in per capita wealth is due principally to the rise in prices in recent years, and not entirely to a corresponding increase in the quantity of wealth, as economists figure it, there is no question that the average American family can afford to maintain a higher living standard than ten years ago.

"This is shown in the heavy buying of motor cars, in the greater proportion of more pretentious and comfortable homes being erected the country over, in the greater travel in Pullman cars, in tremendously increased road building, in the generally better standard of living, and in every line of business."

In per capita wealth, the United States is probably by far the richest of any country of large population. The American nation is also the richest in the world, although three countries have larger populations, India and China much larger.

The Department reports that the American national wealth on Dec. 31, 1922, was \$20,803,362,000, of which taxed real property is estimated at \$155,908,625,000. Total wealth increased 72.2 per cent in the decade.

The 153.1 per cent increase in manufacturing machinery, tool and implements is an indication of the tremendous expansion of industry in the decade covered.

SELECT EGGS NOW FOR WINTER SUPPLY

This is the time of year to select eggs to be preserved for next winter's supply, according to E. C. Foreman, chief of the poultry department at the Michigan Agricultural college. Water glass (sodium silicate) is recommended as a preservative. The old and well known method of "putting down" eggs for the winter being considered the most practical and effective. Prices naturally reach their lowest mark in the spring when production is greatest, thus affording the most apparent reason for laying away the winter supply at this time.

Another advantage of spring selection which he brought out by Professor Foreman concerns the quality of the eggs. It seems that the so-called grain-produced eggs, those of Michigan, especially, are produced later in the season. Michigan eggs are improving in quality, it is said. High standards are being set by the commercial egg farmer, and the individual farm producer of eggs is falling in line. The old days of a few "bad" eggs in every dozen are said to be gone.

As a result of this higher standard, the consumption of eggs is steadily increasing. With greater confidence in the product, the consuming public is steadily increasing its demand for eggs.

Remove Spots on Ceiling
Rust spots on the ceiling can be removed with a little undiluted lime dissolved in alcohol. Says Popular Science Monthly: "The lime is dissolved in alcohol with the alcohol until it crumbles into a fine powder. The mixture is then brushed over the spot. When dry the ceiling can be painted."

Expensive Wives of Rome

So expensive were the wives of Rome that Julius Caesar was induced to offer premiums to encourage marriage. He allowed married women to dress more superbly than the unmarried and he relieved of various taxes the married man who has the father of three children.

IN MEMORIAM

In loving remembrance of our husband, father, son and brother, George G. Cox, who died April 29, 1923.

Just the thought of sweet remembrance, Just a memory fond and true; Just a smile of love anew, And a heartache still for you.

Just a slight for olden moments, Just a yearning just for you; Just a tear in silence fallen, And a yearning just for you.

LINER COLUMN.

Side Walls of
"CREO-DIPT"
STAINED SHINGLES
For a True Colonial Effect

Especially the large 24" shingles, with heavy butt, laid with 10" exposure, give an effect unequalled by other side wall material. Using random widths varying from 4" to 12", the monotony of a plain side wall is overcome. They are laid so to break joints and provide a double thickness of these heavy "CREO-DIPT" Stained Shingles. This means a weather protection not afforded by other materials; a warmer house in winter—cooler in summer. Permanent staining made from finest rich pigments (no aniline dyes) are ground twice in pure linseed oil and carried into the wood fibres. They will not curl, rot or warp. Let us furnish samples of colors on wood and prices.
