

ALLERGIES

...ARE NOTHING TO SNEEZE AT.

ALLERGY DIAGNOSIS BY A NEW BLOOD SCREENING TEST OF AIRBORNE ALLERGENS OR FOR FOODS

Now there's an easy, economical way to identify if you're allergic to airborne or food allergens.

It's the new MAST® Allergy Blood Screening Test. For only \$80 you can have a small blood sample evaluated by a physician for over 50 of the most common airborne allergens - tree, grass, weed, pollens, house dust, mite, animal dander and molds - or 23 allergy-producing foods. A combination

screen test for both airborne and food allergens is available for additional charge. Receipt provided for insurance purposes.

The MAST® Screen takes only minutes. You complete a short questionnaire...a small sample of blood is taken - and that's it. Within three weeks you receive a personal consultation of your test results which is included in the initial cost.

Want to find out if and to what you're allergic?
