## Invest in the good earth

Land is our most precious commodity and it is becoming more precious with each passing day. Whenever a new factory, office building, apartment complex, super highway, airport, or a new home is built, our supply of land suitable for home building is decreased. And as the supply decreases, the price of the remaining land increases. Barring an economic catastrophe, land will never cost less than it does now. Owning your own portion of the good earth, is a lasting investment.

Home ownership is more than just an investment in the good earth. It is the best single investment, certainly the best hedge against inflation, available to any family. No other type of consumer durable goods increases in value over the years as does a home. And no other purchase enriches family life in the same way as does home ownership.
