Check up: Robert Craig, president of Magnagard Laboratories in Livonia, believes growing health concerns will prompt increased monitoring of the radiation levels in the work place.

Selling piece of mind computes

Odde are, if you're in an office, there is one right next to you.

Wo're talking computers, or more specifically, computer monitors. And although there is no hard evidence, there are graving concerns that monitors may be ticking time bombs.

Fact: All monitors give off some degree of electromagnetic radiation. Fact: Electromagnetic radiation has been linked to cancer, miscarrieges in pregnant women and other medical ailments.

Fact: There are an estimated 75 million computer monitors perched on office desks, in homes and in schools.

Supposition: We may have a problem here.

Robert Craig, president of Magnagard Laboratories in Livonia, has—if not all the enswers—part of a solution and a little peace or mind.

"There are millions of monitors that are a potential health bazard," Craig said. "What we do is test them to make certain they meet certain standards—and if they don't, we can

shield them.

"When we first started this company, I would make calls and people didn't want to talk about (ELF and VLF electromagnetic radiation). Now when I call, I may not sign a contract, but people want to talk.
"I think in the future — the near future — people will want to test."

Going mobile

Magnegard Laboratories has intro-duced a mobile work station that en-ables technicians to quickly and ac-curately test monitors for very low

frequency (VLF) and extremely low frequency (ELF) electromagnetic ra-diation on site — meaning at the off-

lee. Prior to this innovation, companies interested in testing monitors would have to pack up and ship the monitors to a testing center, wait for testing, and then have them shipped back.

back.

In addition to testing monitors,
Magnagard Laboratories also can add
shielding to those monitors that are

Customer focus as a goal escapes survey respondents

Is it genuinely improved service or just lip service?

Becoming more responsive to customer needs has become the customer needs has become the goal for many companies, but a survey done by the Corporate Calling Center of Detroit seems to indicate that business is not mak-ing a concerted effort in that area.

"Michigan customers do not feel that their opinions have a significant impact on the quality of service provided by the businesses on which they rely," according to the CCC.

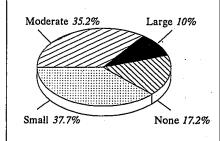

"Specifically, 17.2 percent of respondents said that their opinions have no impact, 37.7 percent said their opinions have only a small impact, and 35.2 percent said that their opinions have a moderate impact on improving customer service. Only 10 perce of respondents feel that their opinions have a large impact."

opinions have a large Impact."
Survey respondents believed
businesses choose not to solicit
their opinions. Fourteen percent
indicated that all or most of the
businesses they patronize ask for
feedback while 66 percent say
only some or a few seek their
opinions. More than 19 percent
said that none of the businesses
they patronize sak their opinions.

A cross-tabulation of the two questions showed that, of the cus tomers who say that all or most o the businesses they frequent ask for their opinions, more than two thirds believe their opinions have a large or moderate impact on ser-vice quality.

Conversely, of those who said that none of the businesses they buy from ask for their opinions, less than one-third believe their opinions have large or mederate impact.

The CCC survey was based on interviews with 490 Michigan res-idents during June, using random digit dialing to select respon-dents. Margin of error is plus 3 percent.

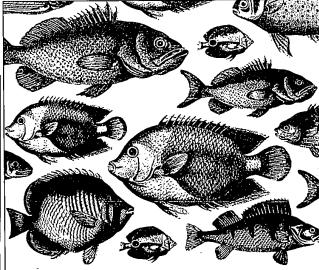

"How much impact do you think your opinions have on the quality of customer service you receive from the businesses on which you rely?"

All/Most 14.0% Some/Few 66.8% None 19.2%

"How many of the businesses you frequent or buy from ask your opinion of their service?"
