PREGNANT POSSIBILITY

Before considering pregnancy, women are advised to address their periodontal (gum) problems. This recommendation is made on the basis of research conducted at the University of North Carolina, Chapel Hill, in which a connection was found between preterm low-birth-weight (LBW) babies and severe periodontal disease in the babies' mothers. According to the research, mothers with gum problems had a seven times greater risk of giving birth to a LBW baby, defined as a baby born before full term and weighing less than five pounds, eight ounces. While the exact nature of the link between gum disease and LBW is not known, it is thought that bacteria released into the bloodstream from diseased gums may reach the placenta to affect the fetus.

This column on gum disease has been brought to you by **LIVONIA VILLAGE DENTAL ASSOCIATES**.
