Actions meant to help deer

Natural
Resource Commission and one by the Huron-Clin Into Metropolitan Authority. Both decisions, whether you favor them or not, were made with the best interest of the white-tailed deer in mind. At its July meeting, held last week in Sault Site. Marie, the NRC unanimously voted to eliminate deer baiting in Deer Management Unit 452 where the bovine tuberculosis outbreak has occurred. DMU 462, the portion of the northeastern Lower Peninsula cast of 1-75 and north of M-55, was established specifically to monitor and manage deer in this area.
Although many hunters will disagree with this decision, common sense dictates that it was a decision that had to be made.

TB surfaced in white-tailed

mon sense dictates that it was a decision that had to be made. TB surfaced in white-tailed deer in 1994. Since that first occurrence TB has spread to coyote, raccoon, bear, bobeat and livestock in the area. The appearance of the disease in livestock sent shockwaves through Michigan's agricultural community as the entire state was immediately in jeopardy of losing its TB-free status.

Michigan was granted TB-free status.

losing its TB-free status.

Michigan was granted TB-free
status for livestock in 1979 by
the U.S. Department of Agriculture. This is an extremely important rating for the prosperity of
the state's livestock agriculture. Who wants to purchase livestock or meat from a state that does not have TB-free status? TB is a serious disease caused by several bacteria that attack

A pair of decisions dealing with menagement of white-tailed deer were recently passed, one by the state N a t u r a l Resource Commission and one the respiratory system. It can be treated successfully in humans through six months of treatment with antibiotics. When contract-ed by wild animals, it's a slow, but certain death sentence.

but certain death sentence.

TB is primarily spread
through the air through coughing and sneezing. Animals that
are in close, nose-to-nose contact
with each other are susceptible
to the disense. Researchers
believe the disease is maintaingitself in Michigan's deer herd
because of the close contact
between deer resulting from the
massive feeding and baiting
practices in the area. but ce TB

massive feeding and baiting practices in the area. In order for the rest of the state to retain its Three status the USDA mandated that both supplemental feeding and baiting of deer be prohibited in the Tullimited anterless permits will again be available in DMU 462 in an effort to cull the herd and reduce the number of deer per aguare mile. Supplemental feeding practices have delevated that number to 30 to 40 deer per square mile in some areas of DMU 452 as opposed to a preferred denaity of 10 to 15 per square mile.

The NRC will not on regular.

ferred density of 10 to 16 per square milo.

The NRC will act on regula-tions regarding deer feeding at it's September meeting as part of Michigan's overall strategy to eradicate Bovine TB from the

Park deer management

Park deer management
Mennwhile, the Board of Commissioners for the Huron-Clinton
Metropolitun Authority votes
deer populations at Kensington,
Stony Creek and Hudson Mills
metroparks.
Simply put, there are too
many deer in all three of these
parks. Park users enjoy watching and photographing deer, but
the populations have exceeded

the carrying capacity of the land and the park's biological beliance has been upended. Car-deer accidents on local roads and overgrazing in the parks are top concerns. The deer are literally entire the meshes out of a home. To date, 19 species of wildflowers alone are now nonexistent in these metroparks and songbird numbers are dwindling. The browse line in some areas is five to six feet high. Michigan Department of Natural Resources biologists feel a deer density of 15 to 20 deer per square mile is appropriate for the habitat within these parks. The metroparks are shooting for a density of 20 to 25 per square mile an aerial survey of the parks taken in January revealed there are 117 deer per square mile at Kensington, 82 per square mile at Kensington, 82 per square mile at Kensington, 82 per square mile at Stony Creek, and 50 per square mile at Stony Creek, and 50 per square mile at Hudson Mills.

Obviously, something needs to

To reduce the herds, the board voted to use controlled shotgun and archery hunts at Stony Creek, controlled archery hunts at Hudson Mills, and sharp-shooters at Kensington. The

shooters at Kensington. The plans are contingent upon approval from the Michigar DNR.
Venison from the deer that are killed will be donated to local food banks through Michigan Sportsmen Against Hunger.
The board sheuld be applauded for not bowing to pressure from outside groups who pushed for personal agendas rather that the best interest of the overall deer population and the park's ecological balance.
