

Treat Your Feet Right

Do you know that a large portion of the ills of mankind result from improper care of the feet? Exceptional care should be taken at this time of the year to clothe the feet properly and avoid unnecessary exposure.

Here is a lace boot 12 inches high particularly adapted to fall and winter wear. It is our

Rouge Rex

No. 478

The upper stock is cut from a tan colored velvet skin of the very best quality. In the course of tanning, this leather is put through a process which softens and at the same time toughens the fiber, and it is then thoroughly filled with an impregnating compound which makes No. 478 an ideal wet-weather boot, as nearly waterproof as a leather boot can be made. If given a thorough dressing every week or so with Rouge Rex Waterproof Grease these boots will retain this waterproof quality and their life of service will be greatly lengthened.

The vamp of this boot extends clear through under the cap on the toe, giving double wear at that point. The bellows tongue serves to completely exclude the dirt and snow.

The soles of No. 478 are of triple thickness. The outer sole is what is termed "Indestructible," being of chrome tanned leather specially treated, so that it is absolutely waterproof, and in wearing quality superior to any other sole leather made.

Ask your dealer for the Rouge Rex boot No. 478. Write us if he does not carry them.

Whitmore's Shoe Polishes

FINEST QUALITY LARGEST VARIETY

Colors, every requirement for cleaning and polishing shoes of all kinds and colors.

GILT EDGE, the only shoe polish that positively cleans Gilt, Black and Polished shoes and (Patented) Boots and Saddle leather without rubbing. It is the only shoe polish that will clean and polish all kinds of leather, and it is the only shoe polish that will clean and polish all kinds of leather, and it is the only shoe polish that will clean and polish all kinds of leather.

WHITMORE BROS. & CO., 30-32 Albany St., Cambridge, Mass., The Oldest and Largest Manufacturers of Shoe Polishes in the World.

Make the Liver Do its Duty

Nine times in ten when the liver is right the stomach and bowels are right. CARTER'S LITTLE LIVER PILLS gently but firmly compel a lazy liver to do its duty.

Cures Constipation, Indigestion, Headache, and Distress After Eating.

SMALL PILL. SMALL DOSE. SMALL PRICE.

Genuine must bear Signature

Dr. J. C. Wood

Ladies: Beware of cheap imitations. No carting, no rubbing, no forcing, no forcing, no forcing.

RECLAIMING CUT HARDWOOD TIMBER LAND

By R. S. SHAW,

Dean and Director Michigan Agricultural College.

Such Land Could Easily Be Made to Produce More Pasture by Scattering Grass Seed and Piling Loose Logs.

In order to reclaim hardwood stump land and prepare it for the production of farm crops, action must be taken quickly after the timber has been removed to prevent the land from becoming a waste. The first step is to scatter grass seed and pile up the logs. This is particularly true where the land is to be used for pasture.

The only practical way to clear such lands consists in producing conditions which will hurry the rotting of the stumps in the ground and the debris on the surface. In order to do this a fairly good job should be made of clearing and burning, and there are a few opportune times to do this work. It can be so arranged. To pile the brush and partly decomposed logs and pull all small stumps and brush to one side. On the other hand it is much more desirable to leave the brush and logs in place, as they will rot in a few years, leaving the land in condition easily prepared for cultivation.

A good seed clearing is essential to success and a good percentage of timothy is particularly desirable.

Onion Culture

The essential requirements of a soil upon which to grow onions profitably are a high state of fertility, good mechanical conditions in order that the crop may be easily worked, sufficient drainage, and freedom from weeds. If the soil has the proper mechanical properties, that is, if it contains sufficient sand and humus to be easily worked, and is capable of draining away all other requirements can be met. The three types of soil best adapted to onion culture are sandy loam, sandy loam, and sandy loam. The sandy loam is the best, as it is the most fertile, and it is the most easily worked. The sandy loam is the best, as it is the most fertile, and it is the most easily worked.

The onion belongs to that class of crops which gives best results under very intensive culture and the greatest yields are secured when a moderate acreage is planted and the work concentrated in a most thorough manner. As a general rule onions should follow some crop that has been kept under the hoe and free from weeds the previous season. Corn, beans and potatoes are suitable crops with which to precede onions.

Onions should not be planted on the same place of land year after year, and some system of crop rotation should be maintained. Care should be taken, however, to use crops in the rotation that will not be exhaustive of the high fertility necessary in the onion land. During the year the land is not devoted to onions it can be planted to some truck crop that will give a return that will justify the application of large quantities of fertilizer or better, to a leguminous crop to be turned under as a green manure. Continuous cropping with onions will cause the land to be more infested with both disease and insect enemies, than will a crop that later injure the crop to such an extent as to render it unprofitable.

The methods of preparing the soil will depend somewhat upon its character and the system of production to which it is to be devoted. It should be plowed to the depth of four or five inches. It is essential that the fertilizers be well mixed with the soil.

There is perhaps no fertilizer so well adapted to the production of onions as well-composted stable manure, and it should be spread on the land several months before planting to onions. A fertilizer adapted to the growing of onions should contain four to seven per cent. of nitrogen, four to five per cent. of phosphoric acid, and eight to ten per cent. of potash. A fertilizer of this character will cost \$18 to \$10 a ton, and can be profitably applied at the rate of 1,000 pounds to the acre on most soils.

The following mixture can be mixed at home and uniformly distributed

GIRL'S SLAYER CAUGHT

George Spangler, 30 years That He Killed

Mallida Rex of 959 Beaulieu Ave., Detroit.

Mystery shrouding the murder of 12-year-old Mallida Rex in the alley in the rear of her home at 919 Beaulieu street, was cleared by the confession of George Brown Spangler, a laborer, 30 years old, 537 Elmwood avenue, whom the police had taken into custody.

Spangler, after he had been in a cell at central police station since his arrest, called to Dorman Erke and said he was ready to make a complete confession. Detectives John Steinheil and Golden brought Spangler up to the detective's room at once and there took his confession in detail.

According to the murderer's own story, he cut the girl's throat; first and then slashed her abdomen.

Spangler has been regarded as a friend of the Rex family. He is mentally unbalanced, and drinks heavily. He became acquainted with the parents of the Rex girl, Mr. and Mrs. Jacob Rex, when he was a boy, and until a few years ago, frequently visited the Rex home. It was at these visits that Spangler formed an acquaintance with the girl.

Spangler accompanied by officers of the police headquarters, was started on a journey to the Beaulieu avenue party, every one of whom was silent. The undertaker a weird night investigation of the blood-stained sands.
