May 26, Mrs. G. Perrin, teaching	155.00
May 26, Farmington State Bank	1.00

Total Expenditures \$2,519.84

World's Biggest "PBX" Serves Banking Group

The skyscraper shown at the right, located in downtown New York, is the headquarters of the City Bank-Farmers Trust Company. Fifty-nine stories tall, it is one of four buildings in Manhattan higher than the famous Woolworth building. On the fifteenth floor is the largest telephone private branch exchange ("P. B. X.") installation in the world, serving this bank and affiliated institutions, which include the National City Bank and National City Company.

Left: Part of the dial mechanism. Right: The manual switchboard.

Enough telephone central office equipment to care for a city of 50,000 is required for this banking group, interconnecting their headquarters and some 40 branches by means of 220 "line lines," 430 trunk lines, and a present installation of 2,900 telephones. Calls within the organization are dialed direct, as are local city calls. Out-of-town calls, and all incoming calls, are handled at a manual switchboard. A separate teletypewriter system transmits written messages by wire.

COMMISSIONERS' PROCEEDINGS

Regular meeting of the City Commissioners held July 20, 1931.

Called to order by Mayor Lamb at 7:10 p. m.

Commissioners present, Osmus, Goers, Hatton Stamann, Gilmeister and Hamlin.

Minutes of the meeting of July 6, read and approved.

Moved by Hamlin that the Peoples Bank of Farmington be named sole depository of the city funds. Carried: all yeas.

The Commissioners instructed the clerk to send Porath and Son contractors a bill for \$250.00 for water used in the construction of the cement pavement on Grand River Avenue.

Mr. Harris of Charles K. Harris company spoke to the commis-

sion concerning the audit of the city books just completed by their firm. The audit is the most complete and satisfactory of any that have been made.

W. G. Malcolmson of Detroit sent a blue print with a number of requests concerning property owned by him in the eastern part of the city. The matter was discussed by the commissioners. No action taken.

Adjourned 8:50 p. m.
N. H. Power
City Clerk

70 LICENSES REFUSED

Motorists who cannot read or write the English language sufficiently well to determine the meaning of road warning and direction signs cannot obtain auto driver's licenses under the new 1931 law. Records of the department of state show that since the new law has been effective, 70

licenses have been refused for one or another, six of these have appealed and there are 200 applications now being held for further investigation before final rejection.

CIRCUS AT PONTIAC

Sensations and thrills are packed into the 1931 performance of the Hagenbeck-Wallace Circus, which will make its appearance in Pontiac on Saturday, August 1. Great interest has been manifested in the coming of this high-class circus.

Heading the list of dare-devils is "The Great Wilno" fired with violent velocity from the mouth of a monster cannon. Wilno's act is one of the sensations of the present day, as this human bullet shoots through space from the huge gun to a net many feet away.

California is tearing down 100,000 roadside billboards. The idea of making it possible to see America first is spreading.—Tolado Blade.

Hollywood Smile

DOROTHY MACKAILL, one of Hollywood's prettiest and most successful actresses of the talking motion pictures, sees plenty of laughter and fun in the film colony. In the Radio Newsreel of Hollywood, radio feature in which she is heard, she shows that there is plenty of hard work too, and a sufficient number of days when the rule is early asleep and early awake for the day's tasks. Miss Mackaill is one of several featured actors and actresses famous on the screen whose voices are heard weekly in this 32 week radio serial. The sketch was especially prepared by Gaspario Ricca, noted New York artist.

NO NEED TO SHOUT ON TRANSATLANTIC CALLS

When talking for the first time on a transatlantic telephone call, many people seem instinctively to raise their voices and shout as loud as possible, just as in the earlier days of long distance telephony, people thought it necessary to talk louder, the further away they conversed. However, they soon find that a clear voice, rather than a loud voice, is what is necessary, and, as a matter of fact, talking loudly not only is quite unnecessary, but accomplishes more harm than good.

Enterprise Liners bring results.

JAVA IS NEWEST LAND REACHED BY TELEPHONE

Radio Service via England and Holland Uses Circuit Over 10,000 Miles in Length

With the opening of regular telephone service between North America and the island of Java, in the Dutch East Indies, on April 1, communication with thirty-two foreign countries is now made available to all Bell and Bell-connecting telephones in the United States. Java has a development of some 40,000 telephones.

Voices from telephones in the Bell System make the first leg of the journey to Java over the regular transatlantic radio telephone channels. In England the calls are routed via land wires to London, and are then switched to Amsterdam over a land line and submarine cable. In Amsterdam they go on the air through a Dutch short-wave station, to be received at Hantsjokke, the receiving station in Java. The transmitting station on the island is at Soerabaya. However, at certain hours of the day, connection will be established through a German station near Berlin instead of through the Dutch station.

The length of the circuit from New York to the long distance center in Java at Bandung is 10,400 miles via Amsterdam, and 10,900 miles via Berlin. There is a time difference of twelve hours and twenty minutes between New York and Java, so that, when it is 9 o'clock in the morning in New York, it is 9:20 that evening in Java.

NEW YORK TO HAVE OVER 200 TELEPHONE CENTRAL OFFICES

Eight new telephone central offices have been placed in operation in New York City, and three more will be opened later in the year. This brings the total number of central offices in the city up to 206, which exceeds the combined total of central offices in the next three largest cities in the United States: Chicago, Philadelphia and Detroit—a fact which illustrates the magnitude of New York's telephone system.

Televisions

YOU WOULD say she had X-ray eyes . . . was clairvoyant . . . a fortune teller—except that thousands of shoppers see as clearly as she into the contents of perfect opaque jars, and fortell with the same accuracy the future of the things they buy.

Advertising is her television. Advertising gives her complete advance information. Quietly, in a congenial corner of her home, she thinks and determines before she buys. Finding out about the newest foundation cream, the crispest breakfast food, the most gossamer brand of hose. Comparing these with others. Making selections serenely. Going forth to buy . . .

She has only this to do. No worrying or hesitating when confronted by two jars, each equally inviting. No doubts about their makers. Advertisements have told her the invisible merits—given her clear true images of the contents of those jars, and the results of their use.

Rare is the woman who can boast she has never bought anything she wishes she hadn't bought. But with aid of advertisements, that sort of buying is almost entirely done away with. A regular reading of advertisements keeps shopping-temper sweet.
