SUBARU

Comes to Farmington!

YOU RIDE IN STYLE and COMFORT

"The Wagon"

This Subaru wagon is a great Subaru car. It has a quiet horizontally opposed engine. Quiet motion. Inboard breaks and rack-and-pinion steering. And, of course, the stable front-wheel drive. On corners, curves, ice, snow, gravel, all the slippery spots — it's the same stable-riding, road-hugging, easy-steering Subaru. It has a back seat that folds up flat against the front seat. The back opens up completely. The hatch lifts up, the tailgate flips down to make a loading platform that's only about 15 inches from the ground so you don't have to lift up and over to load it.

"Front Wheel Drive"

Most cars don't have front-wheel drive, they have rear-wheel drive which means you're sitting up front doing the steering but the rear wheels are doing the pushing. You really notice it when you're turning a corner, the back swings out, you're broke! The rear wheels haven't got the message yet. That wasn't what we wanted for the Subaru. Front-wheel drive is better, the wheels that steer the car are also the wheels that drive it. Everything's up front, the engine, the transmission, the differential. You also get unbelievable traction because the weight of the engine is pressing down on the wheels, the wheels that do all the work. You get safer cornering and better traction on snow, ice, even loose gravel. That's control. Control on rear-wheel drive can give you. Then we made all the right connections. We call it the Subaru FF system.
