The Aid is continuing to sell canned fresh fruit and vegetables, stationery, and Christmas cards.

OPERATOR PREVENTS FIRE IN DENVER HOSPITAL

Prompness and courage on the part of a telephone operator and seven nurses prevented a probable panic when the Physicians and Surgeons Hospital in Denver, Colo., recently caught fire.

The blaze had gained considerable headway before it was discovered. In the absence of Mrs. Bessie A. Keener, Superintendent of the hospital, Miss Peggy Molean, the telephone operator, took charge of the situation in masterful fashion.

Her first act was to notify the fire department. She then calmly proceeded to warn the nurses on the three floors of the hospital of the impending danger, ordering them to close the door at every patient's room and pull down the shades.

Nineteen bedridden patients were confined in the hospital at the time, and so quietly did everything proceed that some of them were not even aware of the fire, as, in accordance with the regulation, the fire department cut out their sirens and whistles about six blocks from the hospital. The blaze was confined to the south wing of the building.

Along with the old models may also be seen one of the Bell System's most recent devices for calling the person at the receiving end of the line to the telephone.

An original large box telephone, one of the first put into commercial use is shown, as are also an early hand telephone developed in 1877, an 1878 model with a red band around the handle of the transmitter to indicate that sets so marked were for export only, several models of early commercial hand telephones, and the telephone used at the opening of the first transatlantic line between New York and San Francisco.

Another interesting replica is of Bell's liquid transmitter and tuned reed receiver, which has an even greater historical significance, as it was with the original set of these instruments that the first complete sentence was transmitted on March 10, 1876. This date is recognized as the real beginning of telephony.

Modern Instruments Also Shown

Among other exhibits is an original box telephone of 1877 equipped with the "Watson Thumper," which was the first model devised for calling the person at the receiving end of the line to the telephone.

James (Jimmie) Layn, for nine years connected with Olin Russell, has started a garage service at 3728 West Grand River, offering skilled work at low rates, which will be retained permanently, he has announced.

Mr. Layn will specialize in Ford service, but is prepared to do work on all makes of cars at equally low prices. His advertisement in this week's Enterprise gives an extensive idea of what he is prepared to do.

All his work will be guaranteed satisfactory.

AUXILIARY TO MEET

The North Farmington Auxiliary will meet at the West Bloomfield Community Hall on Tuesday, October 18. A pot luck lunch will be served at noon. Plans for the annual dinner and bazaar will be discussed at this meeting.

WASHINGTON HAS LARGE TELEPHONE COLLECTION

Smithsonian Institute Houses Models of Bell's Invention

Visitors to Washington, D. C., desirous of seeing the telephone exhibit of the Smithsonian Institute, will find it in the building known as the Old Museum—the same building that houses Colonel Lindbergh's "Spirit of St. Louis," and many other interesting things.

Includes Many Early Models

The telephone exhibit includes early models which now have great historic interest. The first model is one of the two original membrane magneto telephones used by Dr. Alexander G. Bell and Thomas A. Watson, his assistant, in their first two-way long distance telephone tests, made between Boston and Cambridge on October 9, 1876. Although the distance was only two miles, this test was the forerunner of the vast system of long distance communication used by people all over the civilized world today.

A replica is shown of Bell's single pole membrane magneto telephone which was demonstrated at the Philadelphia Centennial Exhibit in 1876. There are also replicas of the harmonic telegraph transmitter and receiver used on that memorable occasion in June, 1876, when Bell first heard the twang on the transmitter reed plucked by Watson, and from which the first telephone to transmit speech sounds was developed.

Another interesting replica is of Bell's liquid transmitter and tuned reed receiver, which has an even greater historical significance, as it was with the original set of these instruments that the first complete sentence was transmitted on March 10, 1876. This date is recognized as the real beginning of telephony.
