TEACH DRIVING TO CUT MOTOR DEATHS

High School Courses Urged as Result of Survey.

New York.—Spread of automobile driving and safety courses in high schools as a means of cutting down the high death rate from motor mishaps is advocated as a result of a national survey conducted on the subject by the Young's Home Companion, which makes a stirring appeal to parents to insist on safety education for their children.

Parents are also urged to back up what can be taught in schools spurred on by the realization that "at the present rate, one out of every three children faces the probability of death or maiming from motor accidents in the course of a lifetime."

"Schools are doing far too little to teach safe driving," the survey reveals. "In fact most of them give no automobile safety training. When they do try to teach highway safety, they often find themselves handicapped by having to offset the poor influence of parents. As children approach driving age, they should be taught in the high schools, by experienced and qualified persons, how to drive safely. There is no good reason for not giving driving and highway safety instruction to every high school student in the country. The essence of the bad driving problem would be attacked, for not only do the records show that drivers of high school age are poor operators, but from our high schools will come most of the future operators of motor cars."

Action in Nine States. "Steps have been taken toward providing driving instruction for high school students in nine states, the District of Columbia and the city of New York. Several of the states have been doing it for some time. In New York, where 50 high schools provide this training, credit is allowed to students taking the safety courses.

"In the Garfield high school, Altoona, there is a student Motor Traffic club which studies the difference between highway conditions before and after enactment of traffic laws.

"There should be more of that sort of thing. "The most effective instruments for improving the situation, so far as the younger generations are concerned, seem to be education and example. The latter is of first importance to parents because with operation of motor vehicles, as with other phases of family life, the child is deeply interested by what the parent does. If you are careless and reckless with your car, you cannot expect your children to drive much differently. If you scoff at traffic laws you cannot expect your children to respect them either. If you agree with you that such laws are silly and not to be taken seriously. If you are a parent who tells your boy or girl to watch out the rear window for motor vehicle officers while you challenge death by stopping hard on the throttle, you have no right to expect youth to be law-abiding.

Death Toll 36,000. "Approximately 36,000 persons were killed in this country by automobiles in 1934, an all-time record. During that year one human being was killed by automobile in the United States every 15 minutes, and somebody injured every 31 seconds! "The further statistics are necessary. If only every parent in the country would think about these simple figures! If they were any kind of men or women they would be anxious to remedy the tragic situation. Once a sufficient number of parents realize what it means, some sort of solution will be forthcoming.

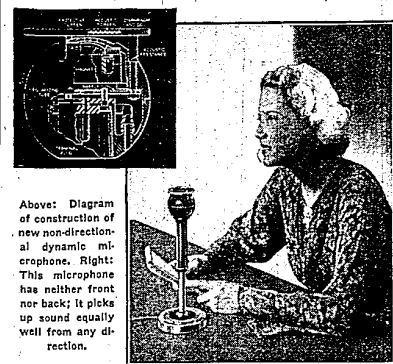

"Members of parent-teacher associations, and those parents who try to be an influence for good in their communities through service clubs or other organizations, can do a great deal to arouse other parents to action.

"People are not behind the vehicular traffic laws. Until they support these laws, or substitute new ones which are universally popular as well as effective, there will be little slackening in the fatality rate. They will not back up the laws until they are willing to obey them, and they will not do that until they are aware of the murderous potentialities of automobiles which are not operated by safety-conscious drivers."

Price of Chewed-Off Ear Fixed at \$2,031 by Judge

Eau Claire, Wis.—Holding that "a man should not be able to bite off another man's ear and get out of paying for it," Judge Patrick Stone in the United States District court here granted judgment of \$2,031 against Carl Christensen by George W. Farrell, tavern proprietor, who told Christensen for biting off his right ear in an altercation. Christensen's attorney argued that his client did not bite Farrell's ear off intentionally, but Judge Stone found his doubt as to anyone being able to bite off another's ear unintentionally and added: "Two thousand dollars is not a very large amount to pay for an ear these days and you couldn't have mine for less."

Every Direction Is "In Front" of Newest "Eight-ball" Microphone

Above: Diagram of construction of new non-directional dynamic microphone. Right: This microphone has neither front nor back; it picks up sound equally well from any direction.

A new air-stream-line microphone, which picks up sound equally well from any direction and which promises to revolutionize technique in radio broadcasting studios, has been developed by the Bell Telephone Laboratories for the Western Electric Company. In size and shape the microphone resembles a billiard ball with a fast screw for a lat. In fact, the radio trade has already dubbed it the "eight-ball mike." In engineering parlance, however, it is known as a non-directional dynamic microphone.

The ideal of microphone designers has long been to create an instrument which would make a faithful clear copy of sound pressures in an undistorted sound field. Great progress has been made, and the microphones used today in radio broadcasting and sound picture studios represent tremendous improvements over earlier types. The new instrument is considered to be the greatest advance made in recent years.

Its response is independent of the angle from which sound approaches and covers faithfully a wide range of frequencies.

The advantages of the new microphone have already become apparent as a result of tests made by broadcasting companies in their studios. Only one non-directional microphone is needed to pick up a large orchestral or dramatic show, in place of several of the former types which have up to this time been required. Furthermore, because of the full circular pick-up, it has been found that dramatic groups, quartets and vocal ensembles need not crowd and crouch over the new microphones as over others. It has no front or back.

Tremendous Trifles

By ELMO SCOTT WATSON

A PINCH ON THE LEG

THEODORE ROOSEVELT wanted to be nominated for governor of New York because it was a stepping stone to the Presidency. Senator Thomas C. Platt, Republican boss of the Empire state, had decided that the Vice Presidency was the place for the Rough Rider.

Platt tried to make Roosevelt promise that if the New York Republican caucus endorsed him for the job, that he would not decline it. Reluctantly T. R. agreed, then added: "But I shall certainly urge them to name another."

At the caucus, Roosevelt was asked to be nominated. Frank Platt, the boss's son, interrupted. "All right, but I'll pinch you, if I see any signs of your getting up and declining!" In the caucus, Roosevelt did speak emphatically against his candidacy for Vice President and urged that it be given no support. Friends gathered about him and pleaded with him to decline. For moment he wavered. Then young Platt pinched him on the leg and whispered, "Remember your contract with the senator!" So Roosevelt kept faith with the boss and accepted the nomination.

But the joke turned out to be on Platt after all. He thought he had "ebled" Roosevelt by making him Vice President. McKinley died from an assassin's bullet and T. R. went to the White House—sent there by a pinch on the leg!

Rubber Generates Electricity. Rubber is an excellent generator of electricity. An ordinary rubber band can be used to generate either a positive or negative charge.

Fur Source. Argentina is the world's principal source of supply for guanaco, fur—the pelt of the young guanaco.

First Use of Music. Music was first generally used for religious celebrations by both heathens and Christians.

Equator Not a True Circle. The Equator is not a true circle. There is protuberance on the globe in North Africa.

Steel Mills Make 500 Products. Steel mills turn out 500 different products, from 15-ton ingots to spring wire for watches.

Jurisprudence. Jurisprudence is the science or philosophy of law.

Apes and Men. "There is almost as much difference between the ordinary person and the true genius as between the highest apes and the lowest man. If the apes could reason extensively, most of the normal conduct of average people would seem to them abnormal, indeed insane. So, with geniuses—almost anything they do is bound to be extraordinary and often seems to us eccentric, odd, peculiar, and even insane.—Detroit News.

Former Conroy Farm May Be Subdivided

Twenty-five acres of farm property, previously a part of the Conroy farm, corner of Ten Mile and Orchard Lake Road, has been sold by the owner, Mrs. Crittenden Taylor (formerly Jeanette Hamilton of Farmington) of Toledo to the Empire Investment Co., Detroit. It is understood that the company plans to divide the property into small sites, and that it will be put into the real estate market as such in the near future. Edmund E. Appelfhof was the real estate agent in this transaction.

RESIDENTS HEAR INTERESTING TALK BY ARMY MAJOR

Several neighboring families assembled at the home of Miss Christianity and Miss Ruth Carlisle on Oakland Road on Wednesday evening to hear Major Christianity's nephew, Major Pickett of the U. S. Army, who was recently stationed at Scottfield Barracks on the island of Oahu, Hawaii.

The major told of the interesting life on the island, and showed several reels of moving pictures in colors taken by himself, of the flowering trees, the famous resorts and beaches and one amazing reel of Mauna Loa volcano in the process of erupting last year.

Among those present were Mr. and Mrs. William Slocum, children Billy and Susan, and Howard Turner, Malby and Allen Warner, Mr. and Mrs. Floyd Nichols, Mr. and Mrs. Clint Wilbur, Mr. and Mrs. Lloyd Gullen and son Bob, and Mr. and Mrs. Charles Pettibone.

Major Pickett is the grandson of Gen. George E. Pickett of Virginia, who served in the Confederate Army during the Civil War.

Harry German to Pitch At Free Picnic Sunday

Residents of Farmington and vicinity will have an opportunity Sunday, June 21, to see a real display of old time talent when, in conjunction with a free picnic, such former stars as Harry German, 62, of Northville, Bobby Veach, Clarence Hutchins, Fred Franz, Hub Lee, Jesse Ziegler, Jack Whitehead, Bud Schaefer, Roy Burgess and many others take part in a baseball game.

The picnic will be held on Five Mile Road one and one-half miles west of Middlebelt road and will be under the joint sponsorship of Harry Wolfe and the Morning side Riding Academy.

The complete program for the day includes a horse show at 1 o'clock. In the horse show classification will be jumping, rearing, trick riding, and bucking exhibitions. This will be followed by a coon hunt then the baseball game. Games will be held for the children.

Beautiful Sports. Sparta, once the most powerful city in Greece, is now probably the most beautiful. Few ruins of the ancient capital remain, but its location on the broad plain of the Eurotas, under the foothills of Mount Taygetos, is still supreme.
