COMMON POTATO
IS NON-FATTENING
AND ECONOMICAL
Market reports state that old potatoes are practically "played out" and that new state is in sight.

Don't Fear The Calorie!
The national Bureau of Home Economics has a cheering message for the woman whose very soul yearns for potatoes but who makes a taboo of them for fear of overeating...

Judgment

By HARRY HARRIS
(Released by Associated Newspapers WNU Service)

MYRTLE BLAKE was weary, cold and bitterly discouraged. Her three weeks in the big city, where work was supposed to be plentiful, had been nothing but disillusionment. Although having had no special training, she had been a successful saleslady for several years in her home town and when she cared for; yet that did not seem to help her.

Now it was noon, so she could interview anybody else all after one o'clock; therefore she came again to this great public mart and waiting-room as she had done several times before. It was warm inside but she was always liked to watch humankind bustle about intensely at its matters of small importance. There was a soda and lunch counter and a counter with its row of patrons; people halted long enough to glance into the windows of the various shops that opened off the great central hall; radio and an orthodontist hastened tried vainly to out-scream each other; and amusing, cheerful pandemonium—an easy piece to forget one's very identity.

Unable to indulge in a soda herself, Myrtle watched those who could, and particularly the cashier who took their checks. In a cage, perched high on a stool, and behind one hand were visible. She had short, shining dark curls, a face of alabaster and roses, great dark eyes enhanced by heavily mascaraed lashes and faultlessly tweezed and pencilled brows. From the vividly carmined lips two strings led to a tall glass of ruby something, held—oh, so daintily—by a snowy hand with spotted fingers; and five finger-nails that rivaled any all-polish advertisement.

Each time that Myrtle had seen her it had been the same—at this time she evidently did her work with either hand; she never seemed to remove the strings to speak, though her smile was radiant. She had for Myrtle a sort of odd fascination, like some kind of automatism with the strings as connecting rods between head and engine.

"Wonder how much she makes," mused Myrtle. "It must be fine to work in this building! To think of that beauteous what-it-is having a good job like this while I must trudge in vain and starve!"

Banana Tree Dwarfed To Facilitate Harvesting

A banana "tree" will grow to a height of 30 feet, and with leaves 15 feet long, but in plantations it is kept much shorter to facilitate harvesting. Bananas are a commercial proposition to grow, for on the land required to grow a hundred pounds of potatoes you can grow as much as four thousand pounds of bananas, notes a writer in London Answers Magazine.

From this it is seen, the plants need very little attention and little effort is necessary to cultivate further crops. The fruit we know can either be eaten fresh or in a dried state; beverages are also made from bananas, and the dried fruit can be ground into an excellent flour. In the tropical countries where the plant is cultivated, the ten-foot leaves are used for thatching roofs.

The common banana we eat grows on a tree which is only one of a family. In East Africa, one variety grows fruit to the tremendous size of two feet long and about nine or ten inches in diameter. In the other tree, and the fruit has to be cooked.

Another member of the same family gives us the famous Manila hemp, which is made from the fibers in the leaves. After only a short history, the banana has become Britain's most popular fruit food, imports jumping about 70 per cent even in the last nine years. Unlike apples, lemons, and oranges, which are often consumed in cooked and liquid forms, the banana is mostly eaten in its natural state.

By the way, no banana trees have been grown from seed in living memory. It has been so scientifically cultivated that seeds aren't necessary. Use of Gregorian Calendar Britain was neither first nor last to adopt the Gregorian calendar.

The modern calendar was promulgated by Pope Gregory XIII in 1582 and adopted at once by Spain, Portugal and part of Italy, the remainder of the Catholic world soon following. Great Britain adopted the new style in 1752 and Sweden and Tuscany about the same time. But Russia clung to the Julian calendar until after the 1917 revolution and the Greek church did not give it up until 1923.

Death Mask of Napoleon The death mask of Napoleon Bonaparte is exhibited in New Orleans. The mask was presented to the city of New Orleans in 1824 by its mayor and donor, Dr. Francesco Antommarchi, who made the mold at St. Helena 40 hours after the Emperor's death on May 5, 1821.

Why Can't They Have Golf Club Showers in a Man's Home?
He: "I mean showers with plenty of hot water right away—no fuss and no waiting."
We: "Not to disillusion you sir, they DO have. Just turn the faucet and the water's hot."
He: "You mean it? Must be a pretty expensive proposition."
We: "You're due for a pleasant surprise. This electric hot water service is completely automatic, and it costs as little as 10c a day."

The Detroit Edison Company
60 GALLONS OF ELECTRIC HOT WATER COST ONLY 10c A DAY!
