Church School, 12 noon.  
Junior League 5:30.  
Sunday Evening Club 7:00.  
Dates to Remember  
Annual Bazaar December 3.

**CHRISTIAN SCIENCE SOCIETY**  
New High School Auditorium  
Farmington, Michigan

"Soul and Body" will be the subject of the Lesson-Sermon in all Christian Science Churches throughout the world on Sunday, November 21.

The Golden Text (Psalms 66:3,9) is: "O bless our God, ye people, and make the voice of his praise to be heard: which holdeth our soul up, and suffereth not our feet to be moved."

Among the Bible citations is this passage (Psalms 103:1-3): "Bless the Lord, O my soul; and all that is within me, bless his holy name: as the Lord, O my soul, and forget not all his benefits: Who forgiveth all thine iniquities; who healeth all thy diseases."

Correlative passages to be read from the Christian Science text-book "Science and Health with Key to the Scriptures" by Mary Baker Eddy, include the following (p. 250): "Divine Truth must be known by its effects on the body as well as on the mind, before the Science of being can be demonstrated."

## PLENTY OF "A" VITAMINS NEEDED EACH DAY

If a person is not getting enough vitamin A, scientists can "see it in the eye," with a delicate instrument that measures the adaptation of the eye to darkness. This instrument helps them detect nutritional night blindness, one of the first signs of a vitamin-A deficiency.

But, point out members of the home economics staff of Michigan State College, there is a simple way for the homemaker to make sure that her family gets enough vitamin A.

In recent experiment at the Bureau of Home Economics of the United States Department of Agriculture it was found how much vitamin A an average adult man or woman needs. The daily minimum need is about 4,000 international units a day, according to this experiment. Somewhat more than 4,000 units are needed daily to give a margin of safety.

In terms of common foods, enough vitamin A to give an adult a liberal margin of safety for one year would be supplied by the following: One pint of whole milk, one egg; two ordinary-sized pats of butter, and an average serving of a leafy green or yellow vegetable.

Each day children will need their daily quart of milk and suitably sized portions of the foods rich in vitamin A that are provided for the adults.

It is not necessary to include exactly these foods each day for vitamin A. Of the animal foods, fish, liver oils, liver, and egg yolk are excellent sources of vitamin A. Butter and cheese also are often excellent sources. Of the plant foods, the green leafy vegetables and the yellow vegetables and fruits are the best sources.

## OLD RECORDS GIVE HISTORY OF CAPITOL BUILDING

Michigan's state capitol building knew politics before it was born, and lively political squabbles attended its birth, as a perusal of old library records reveals. Records of the geological survey of the department of conservation tell of the search at that time for suitable native stone for the commonwealth's chief structure.

The roof was to have been of copper, if the copper came from Michigan mines and could be delivered at Lansing at 25 1/2 cents a pound. Cost of copper delivered in Lansing was then 31 cents a pound (it is now 12 cents) so a corrugated iron roof was considered, but the building was finally roofed with tin especially prepared in Wales. Foundation footings are of Bellevue, Eaton county, limestone, crushed and mixed with river sand and Ulfica cement. Overlying footings are of Lamport, Ill. limestone, the floors of vaults of Euclid, Ohio, freestone, and the superstructure of Amherst, Ohio, sandstone. It was the Amherst stone that caused most of the trouble.

The Amherst stone has a resistance of 7,992 pounds per square inch while the best Michigan stone then known had a resistance of only 3,362 pounds per square inch and was of inferior color, but some Michigan quarry men, especially at the old Flushing, Genesee county quarry, were quite unhappy about it all.

The capitol cornerstone is of Massachusetts granite. Corridors of the first, second and third floors are of Vermont marble. Fifteen million bricks used were made of Lansing clay. Plate glass was brought from England, and skylights over legislative halls were made of American hammered glass. Logs of Michigan trees on exhibit at the 1876 Centennial in Philadelphia were saved up to make patterns for the ironwork castings used in the structure and to create the iron decorations of the dome.

## MOTHER, SON UNITED BY PHONE AFTER 40 YEARS

A mother and son who had been separated for 40 years were united the other day through the medium of the telephone when James Corey, of San Francisco, talked with his mother, Mrs. Frank Klavich, of Oshkosh, Wis.

In 1899, James Corey was placed in an orphanage in Milwaukee. Later, he was adopted, and not until the death of his foster mother recently was he told that his real name was James Corey and that his people had lived at Onro, Wis. Then followed several months of writing, and through the medium of the Postmaster in Onro, M. D. Anderson, finally it was found that the mother, brother, and two half sisters were living in Oshkosh.

Mr. Corey then placed a long distance call from San Francisco, and mother and son talked with each other for the first time in the twentieth century. Following the telephone call, Mr. Corey made a visit to his mother at Oshkosh.

## Your Valuables

## BELONG IN OUR BANK VAULT

**THE FARMINGTON STATE BANK**  
Farmington, Michigan

Just about the safest place you could ever think of for your important papers and other valuables, would be a private safe deposit box in our strong vault.

Why worry about fire, theft, carelessness, or anything else? Simply bring to this bank the things that you don't want to lose — and you WON'T LOSE THEM. The rental cost is small. Better play safe now.

## Births Higher in First Nine Months of 1940

Births in Michigan for the first nine months of the year are 2,685 more than at the end of September in 1939, it is shown by provisional figures from the Michigan Department of Health, which increase continues through the last quarter of the year, the gain in births in 1940 will be 3,500 over 1939. The total births reported from January through September this year was 73,036, compared with

70,351 reported last year in the same months. The rate per 1,000 population is 18.67 for 1940 and 18.02 for 1939 for these months. Deaths reported for the first nine months of the year total 3,791 as compared with 3,929 in the same period a year ago. Deaths per 1,000 population were 9.86 for 1940 and 10.07 for 1939 for these months.

Of course you can afford  
**ELECTRIC COOKING!**  
Look at my bill—

(\$1.55 a month—average—  
for a family of 3 persons)

"It costs me less than 40c a week to cook on my electric range. Before I got my range, my cooking bill used to run a little lower."

"But for a matter of a few cents a week, an electric range is worth every bit of the difference! Just think: I enjoy electric cooking for less than the price of a loaf of bread or a quart of milk."

"We have a small family—there are three of us—but my neighbor next door cooks for five persons, and HER bill for electric cooking runs about 45c a week. So you see, an electric range costs less than you think. I wish I'd known that long ago. I'd have bought my electric range much sooner."

Another electric servant worth "discovering" is the automatic electric water heater. It provides hot water at all hours—and it is so fully automatic you just install it and forget it. Electric water heating costs less than 10c a day (for an average family of three). . . . The Detroit Edison Company.

**YOUR DEALER** has electric ranges and water heaters on display. Stop in today—on sale at **HARDWARE STORES, FURNITURE AND DEPARTMENT STORES, AND ELECTRICAL DEALERS.**

## 800,000 Model Husbands

(Christian Science Monitor).  
A good plan not only may serve its own good purpose but produce valuable by-products besides. Take the draft of American manhood for military service for example. What previous single year of American history produced 800,000 prospective husbands who knew how to make a bed? Veteran husbands may think they know how, though it is hard to get them to prove it.

Even before the first contingent of American recruits, goes into training, the young men of America are receiving hints on how to make a bed so that it can be slept in. "Basic things" like keeping the centerfold of the sheet in the middle of the bed, working from the foot toward the head of the bed and tucking in the bottom sheet before attempting to camouflage it with the upper ones—these are points that an expert in bed-making is now stressing. There is also the question of the fold-back at the top of the sheet that rests against the chin, and the problem of the pillow.

It does seem a little unnecessary, however, to warn the men against letting the pillow become a pan-cake; in fact, this sounds like the "spoofing" that initiated people always wittily indulge in when instructing the neophyte. And one bit of advice will be decidedly unwelcome to most men of our acquaintance. It is that if one wakes up in the middle of the night with all the bed clothes in a tangle, one should immediately get up and nurse the best of one's wits. There are things worse than sleeping on a sofa, and this is one of them.

## Aristocracy of Tomorrow

(Christian Science Monitor).  
And now, the "World of Tomorrow" belongs to the world of yesterday. But there's establishment to it than that. Forty-five million old Americans—and so many can't be so old—have visited the New York fair. So the estimators tell us. Forty-five million rich whose sons and daughters, cousins are nephews, sisters, brothers, aunts, uncles, fathers, mothers, grandparents, can say, "Oh, yes, one of my relatives saw the World of Tomorrow." This is to say nothing of the 6,000,000 or more who visited Treasure Island on the other side of the United States.

With all these millions of fairgoers, there is practically nobody in the United States who has not been to the fair or who doesn't know somebody who has been to it. Perhaps going to the fair isn't what it was in '93. But it still puts one in the fortunate minority—a kind of democratic aristocracy. It doesn't matter any more that your grandmother wasn't one of those distinguished Americans who were set apart by their visit to Chicago. If you are one of the fifty-one million, you can take satisfaction in the reply of a newly created peer who was taunted by an old-line noble on having no ancestry: to speak of "You" replied the new peer, "are only a descendant. I am an ancestor."

Can it be the Italian press is right when it talks of the "demoprotecracies"? Britain is suspected by Axis commentators of being populated with 47,000,000 Christians, and the United States has now become a nation of 51,000,000 notable ancestors.

## Nature's Proudest Pageantry

(Exchange).  
Autumn to North Temperate America means color. Nowhere else in all the world are the yellows, reds, and, yes, the greens, so brilliant over such a wide landscape, though Eastern China and Scandinavia and some parts of the Balkans provide brilliant shows. Frost itself has little to do with the change, researchers say. Shorter days and longer nights bring a lessening of sunlight with the result that yellow pigments, always present in leaves finally overcome the green. Red, we are told, is a result of plant sugar manufactured in the leaves and prevented from flowing into the rest of the tree by low temperature. All sorts of combinations of these colors are brought about by one leaf shading another, or by variation in direct sunlight.

Autumn foliage constitutes perhaps Nature's best known pageant.
