M.S.C. MEN
DETECT CURE
FOR CATTLE

For more than 30 years cattle
and sheep in the upper third of the
Lower Peninsula in Michigan have
starved and in some cases died
while facing apparently good quality hay and grain during winter
stall feeding apparently good quality hay and grain during winter
stall feeding periods, yet some
of the secret now seems to be solved
with research by four men at Michigan State College.

They announce that what has
been known as "Grand Triverse"
or "Lake Shore disease," gives way
to remarkable recovery in sheep
and dairy and beef cattle when
minute quantities of a cobalt starice research and the size essentially due to a, cobalt detifeiency, which leads to loss of anprovided.
In dications are that the disease
is essentially due to a, cobalt detifeiency, which leads to loss of an
incre provided and low concentration of
red coloring in the -blood of the
animals. Corn and hay grown on
farms in the affected areas has
a lower cobalt content, than that
grown on farms in unaffected
areas.

Apparently normal hay contain
none eighth part of cobalt in a million parts of hay, on a dry basis,
in cobalt deficient areas the
ability provided the probalt is present in but one part
of cobalt in 33 million to 1, billion
parts of hay.

Just why cobalt produces better
appetite is to be studied by the
men, who include A. C. Baltzer, extension veterinarian; C. W. Dunlistry; and C. P. Huffman, associate
Miss Detroits. Mass Dords Alution and their house

is mother Michigan.

Mas Tillman, are visiting in
the dawn in front of
the star faffar was in honor of Miss
Alution on this year's graduates
whi

cobait in 33 million to 16 million parts of hay.

Just why cobait produces better appettie is to be studied by the men, who include A. C. Baltzer, extension veterinarian; C. W. Duncan, research assistant in chemistry; and C. F. Huffman, associate professor of dairy husbandry.

Science To Scan

Michigan becomes a test tube state in mid July when plant path-ologists from all of the North Cen-tral states tour typical producing areas to observe any unusual plant

Dates for the event are July 10-

diseases and controls.
Dates for the event are July 1911-12. Each year the group, numbering 50, selects a state for the
event. This year under the chairmaniship of Don Cation, research
assistant in plant pathology at
Michigan State College, Michigan
is the subject.
The tour begins at 8 a. m. Thursday, July 10, at Stevensville. Berrien county fruit and vegetable
production will be scanned. Then
the blueberry cutture at South
Haven is to be inspected, junusual
in that the blueberry has no known
diseases. Another stop-during the
day will be at South Havien at the
Dow Chemical company's pray research projects where equipment
and methods will be studded.
Second day of the tour brings

Advises Tune-Up On Farm Reapers

"Lead". "register" and "shear are three tuneup terms useful this summer to farmers whose labor problems are accented by movement of the usual extra farm labor into defense industries and army training camps.

Hours and days saved by proper preparation are involved in the suggestions offered by E. C. Saure member of the agricultural engineering department at Michigan State College. Mowers and combine harvesters are especially recommended for advance timenuj joba.

Mowers with proper "lead" are adjusted so cat the outer end of

Movers with proper treat are adjusted so that the outer end of the cutter bar is about 14, linches about the cutter bar is about 14, linches above ground. In operation, the pressure of the grass, moves the cutter bar back so it is in a straight line.

A mower is in regizer when the cutter bar back so it is in a straight line.

A mower is hin regizer when the center of the section lines up with the center of the section lines up with the center of the guard at the dead center positions. Subgittuiting a pitman not suited for the mover is requent cause for lack of register.

Shear is the proper relation between the stationary guard plate

The Michigan Tuberculosis As sociation has recently published a pamphlet, "Tuberculosis and You Child" which will be sent free of charge to any person requesting

MICHIGAN FARMERS GIVEN SOIL ADVICE BY COUNTY AGENTS

LANSING, MICH.—How coopera-tion between Michigan farmers, county agents and the State Agricul-tural Experiment Station is helping to boost cropy yields and reduce pro-duction costs is shown in the increasing—use of recommended for-tilizer grades.

tiller grades.

These grades of mixed fertilizer which soil scientists at the experiment station have found most profit-able through long periods of trial in actual field tests, are known by county agents throughout the state. In many cases farmers have turned to these grades at the suggestion of their local county agents.

The extent to which Michigan

an many cuses farmers have turned to those grades at the suggesting of their local county agents.

The extent to which Michigan farmers have learned the practical benefits of these recommended grades is illustrated by the experience of last year. In the 19th geason, 91.9 per cent of all fertilizer applied to the soft was confided to analyses on the root was the root of all fertilizer cent in 8.3 per cent to the feet was the root of the root was the root of the root
