-Uncle Sam- wants your Gas Refrigerator TO LAST

It's vital to victory to make what you have last! Your silent Gas refrigerator will preserve food better and give even longer service if you follow these simple instructions.

Defrosting Suggestions

- 1. Frost should be removed periodically to keep refrigerator operating at peak efficiency. 2. Frequent defrosting will make it easier to remove ice trays and prolong the life of trays by preventing the damage that often results when trays are forcibly dislodged with tools. 3. Your gas refrigerator has less work to do at night. Take advantage of this by defrosting in the late afternoon or early evening, so that refrigeration can be started before you go to bed.

Correct Use of Refrigerator

- 1. Don't overcrowd. 2. Place the food on the shelves so that there is room for air to circulate around it. 3. Do not cover refrigerator shelves with paper or cellophane.

- 4. Do not cover grill at back of refrigerator. 5. Put food in as small containers as possible. 6. Never forget to reset your temperature control to normal after you have done quick freezing.

Cleaning Suggestions

- 1. The outside finish may be cleaned with a damp cloth. Occasionally spray with necessary to use small amount of mild, smooth white soap and warm water. 2. Clean off any grease or oil which gets on the outside finish or on the rubber door gasket. (Grease or oil destroys rubber.) 3. To clean the interior of the refrigerator, remove the shelves, and wash the porcelain finish with a cloth wet in lukewarm soda solution. (1 teaspoon of baking soda to 1 quart of water.)
