Timely Fertilizing
Timely fertilizing will greatly reduce the crabgrass nuisance. Since this grass is such a pest and since it is an annual summer grass, one should fertilize his lawn in September or March. In this way the normal lawn grasses will grow and flourish in fall and spring and be better able to compete with the rapid summer growth of crabgrass.

Rabbits on Menu
On the West coast, especially southern California, rabbit meat has been on the menus of hotels, restaurants and homes for years. Los Angeles alone during 1942 ate up close to seven million pounds of this tasty dish.

How to avoid Wasting Light

Today any waste of electricity is as serious as wasting rubber or gasoline or other critical war materials. When you save electricity, you save coal. Here are practical ways to save electricity in your home:

- (1) Turn off lights in rooms not occupied, and floor or table lamps not immediately in use.
- (2) Wipe lamp bulbs frequently, also reflector bowls and ceiling fixtures. Dust wastes as much as one-third of your light.
- (3) Flaring lamp shades do a better job of spreading light than straight-sided shades. The wider the opening at top and bottom, the more useful light is directed into the room.
- (4) Avoid dark-colored lamp shades (they soak up light), or try fitting them with white linings. Use good, white paper and fasten seams with Scotch tape. White linings will often increase the amount of light from the lamp by as much as 50 per cent.
- (5) Whenever possible, make floor and table lamps serve more than one person for reading or sewing. A single lamp on a table, for example, can provide light for chairs on both sides of it. The Detroit Edison Company.
