The foctbul hanquet, attended by
about 80 persons, held early in
December, was put on this year
by members of the Parents' Club.

he's mighty useful, the mule. Feed him right and he'll pull all day, no matter how heavy the load or how tough the going.

But the feeding is important. If he gets too little, day after day, he grows weak. So when you but a mule, you're more interested in how much he can pill than in how little you can feed him.

Your Telephone Company pulls a heavy load, too, and for the past three war years the going has been ough. Handling more business than ever before, Michigan Bell has had its largest gross income. But wages, taxes, and other costs have gone up even faster, so net earnings are far below the pre-war ratefar below the earnings of other industries.

It's like underfeeding the mule. If earnings are not sufficient, the Company's ability to pull the load becomes weakened.

Michigan Bell customers want good service. The telephone bill is so small an item in their regular expenditures that customers want really good service even though it might cost a trifle more than they would need to pay for inferior service.

To give you the kind of service you want in the future, when and where you want it, Michigan Bell is underteking a 5-year \$120,000,000 post-war program of expansion and improvement. Money to finance that program must come from the savings of people who want to make a sound investment. But if prospects for future Telephone Company earnings are unattractive compared with those of other companies, they won't supply the money we will need. They'll place their savings elsewhere.

Too long a continuation of a rate of earnings substantially below that of other industries would weaken our ability to raise the money required to meet expected telephone needs. So the future quality of your telephone service depends on telephone rates sufficient to produce earnings attractive to investors.
