IMPROVED Piston Seal

now gives you **Double Protection!**

- 1 Ordinary motor oils become gummy, "stiff" and heavy in very cold weather. They make engine starts difficult, "over-tax" the battery, don't provide quick protection to grinding parts.
- 2 Ordinary motor oils thin out when engine temperature rises suddenly, as it often does on a sunny winter day. Thin-bodied oil endangers motor wear.
- 3 Improved Piston Seal Motor Oil now stays fluid at temperatures for colder than ever before. No sluggish, "dragging" oil around the crankshaft to make your motor hard to start. Just instant lubrication — anytime!
- 4 Also, to protect your engine, Piston Seal with the addition of an amazing new ingredient resists thinning out as the temperature rises. You get positive, instant lubrication — hot or cold!

Use Fleet-Wing Piston Seal for safe lubrication through every variation in winter temperature. Remember, Piston Seal gives you double protection—extra body for the warm days of winter—extra fluidity when the thermometer nose dives far below zero. For double protection for your motor, use Piston Seal Motor Oil—sold exclusively, under written guarantee, through independent Fleet-Wing stations.
