BELL System factories are turning out telephone equipment at the fastest rate ever in order to catch up with the huge nation-wide demand for service.

A lot of folks right here in this community are waiting for telephones simply because we haven't enough switching equipment to serve them—or enough wire and cable to connect

their homes with the central office.

The additional equipment we need is "on order," but it must be tailor-made to work with present facilities—all of which takes time to do. Still, we should be receiving some of it before long. And you can be sure that just as fast as we can get it installed and in service, more people here will have the telephones they want.
