FARM FEATURES

FARMERS NOT TO BE BLAMED FOR HIGH PRICES

Farmers should feel flattered that they are being blamed for high food prices, thinks Arthur Mauch, agricultural economist at Michigan State college. That would mean, he concludes, that the farmer has the power to fix the prices the consumer pays. If he had that power, the farmer wouldn't worry about a depression.

But, recalling a little history and using a little simple arithmetic, Mauch shows that it isn't so. Farm prices are always the first to drop in a depression. The farmer always takes for his product what the consumer is willing to pay after the middlemen get out their costs processing, transporting, and selling, plus a profit.

The real reason for high food prices, Mauch believes, is that consumers have two and one-half to three times as much money to spend as they had in 1939. That represents demand — power to buy food. Farm production has increased about a third, and that is an outstanding performance since we have fewer farms today. This food represents supply.

Economists have contended for years that the relation between supply and demand determines the price. Using simple arithmetic, Mauch then divided the goods into money available to buy and the price is twice as high.

"The fault lies in too much money to spend in relation to the goods to buy and the consumer's willingness to bid prices up. The farmer influences the price by his effect on supply. Since he has been doing his best to increase supply, he can hardly be responsible for gouging the consumer", the economist concluded.

IRRIGATION TEST CONDUCTED AT MICHIGAN STATE

Michigan State College scientists are investigating the possibility that polluted water used in irrigating vegetables might carry communicable diseases.

Dr. W. L. Mallmann, research professor of bacteriology and research, and Dr. Lloyd Turk, soils department, are seeking to determine how clean irrigation water must be to insure that vegetables will be free of harmful bacteria. The project is being carried out under a grant from the U. S. Public Health Service.

Dr. Mallmann pointed out that epidemics, believed to have been caused by impure irrigation water, have been reported in western states. It is not uncommon, he added, for farmers to use sewage sludge or highly polluted river water for irrigating their crops. In addition to providing needed water for the crops, this tends to improve the soil condition of poor land, particularly the sandy type, and also has slight fertilizer value.

To conduct their tests, the MSC professors set up 30 small plots of land in the college farm area, and are subjecting these plots to different treatments. The liquid being used in the experiments ranges from almost clear water to undiluted sewer sludge.

Doctors Mallmann and Turk hope that these experiments will provide a measuring stick by which farmers can be assured that their irrigated vegetables are not contaminated. By bringing samples of irrigation water into testing laboratories of colleges, health centers and other agencies, the nation's irrigators and farmers can be sure of their products.

Driver's Licenses
With the exception of North Carolina, which began the practice only this year, no state re-examines its drivers periodically for driver's license renewals.

TAXI FAX

That's how you'll feel after making that trip in one of our new, comfortable cabs. THE FARMINGTON CITY CAB COMPANY answers all calls promptly... and for your added convenience will pick up and deliver packages, day or night. It's just one of the many services we offer to please you.

This Veteran Goes to School the Hard Way

Irwin M. Fronath, Jr., 22, Bancroft, will start his final year as a student in general agriculture in the Institute of Short Course at Michigan State college in October. Each morning he will milk five cows, do other chores and drive 30 miles to East Lansing for an 8 o'clock class. At night he drives back and does chores before he starts evening studies. The young war veteran (right) is shown in the top picture

Dry Season Causes Forest Fire Hazard

Worst forest fire hazard of the season in the upper peninsula is reported by the conservation department. There has been no rain for 17 days.

Recent heavy frosts have caused rapid drying of vegetation, a condition that is found in lesser degree in counties below the Straits. State and federal fire-fighting agencies are preparing for emergencies and appealing to the public to exercise care.

So far this season acreage losses from fires in both peninsulas are under last year's total.

FARMERS URGED TO TEST CATTLE FOR DISEASE

A caution about cattle tuberculosis was given today by Dr. B. J. Killham, extension veterinarian at Michigan State college. Continued testing and retesting is necessary, he states, even in herds apparently free of disease.

The American Foundation for Animal Health reports that livestock health authorities are expressing new anxiety about bovine tuberculosis.

The foundation says that outbreaks of tuberculosis have occurred in cattle herds in many sections of the country. In addition, there has been a dangerous decline in the number of cattle tested in the tuberculosis eradication project. Last year, only eight million were checked — a decline of approximately 40 per cent in the yearly rate in the past 10 years.

Livestock authorities say that although the disease has been "pretty well beaten", danger will continue as long as a single infected animal remains. Killham urges every farmer to have his herd tested to be sure it is free from infection. Reactors should be slaughtered and government funds are available to pay for such losses.

Record Enrollment Is Expected At M.S.C.
Fall enrollment at Michigan State College has reached a new record high of 15,649 students, and late registrations are expected to push the final total to more than 16,000, according to Registrar Robert S. Linton.

At the end of the four-day official registration, 15,649 students had enrolled, compared to 14,706 at the same time last year. Final 1947 figures showed 15,208 students, however, and Linton predicted that late registrations this year would swell the total to more than 16,000.

KASCO GRO-CALF
Guarantees ALL 5

- Safety... Gro-Calf is safe to feed... it has been carefully laboratory and field tested.
- Economy... Gro-Calf cuts feeding costs by cutting milk-feeding to a minimum.
- Simplicity... It's easy to feed Gro-Calf. Whole milk feeding gradually reduced until only Gro-Calf is fed—less work—less worry.
- Quality... Top quality PROTEINS, easily digested carbohydrates, power-packed vitamins and minerals... all carefully blended into one fine feed—Kasco Gro-Calf.
- Results... Men who have fed Gro-Calf KNOW that it gets results they want in bigger covers faster... in peak condition at a lower cost. Try it—your first calf on Gro-Calf will prove the point!

QUIET

... as an **ELECTRIC** Water Heater!

No noise—no nuisance with an electric water heater. Only an electric water heater gives you all these features...

- Clean—Sootless, smokeless, to save you extra work.
- Cost-free—No flames, no fumes, no worries.
- Convenient—Put it where you want it. Only an electric water heater needs no flue or chimney.
- Completely Automatic—For modern, push-button comfort.
- Always Dependable—All the hot water you want... every time.

A size to fit every need—terms to fit every budget. Installed in your home without charge. See them today at your appliance or plumbing dealer, or at your neighborhood Edison office.

In August, 1978 Edison customers switched to modern water heating... electrically!
