YOUR Gas Range Dealers' OLD RANGE CONTEST

How heavy is
 1
5000 ?
 of an ounce.

One five-thousandth of an ounce is an incredibly small weight. It represents only about 25 tiny crystals of table salt. Yet a pharmacist may at any time be called upon to weigh such a minute amount of a substance in order to compound a prescription exactly. Such precision is only one of the many professional standards a pharmacist must maintain. He has to have a complete knowledge of drugs and their uses. And he has to have a high sense of responsibility. You can rely on him, just as your doctor does.

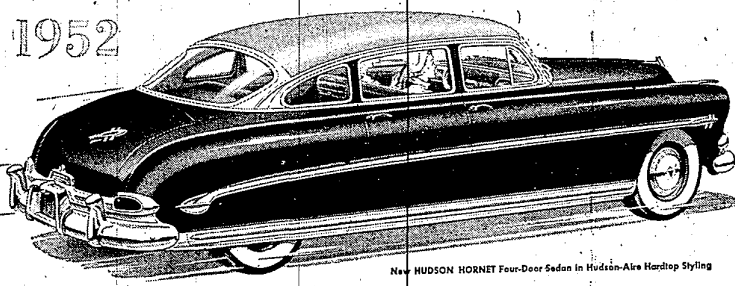

And you can rely on your Rexall Pharmacist to give you, in addition to the benefits of his professional knowledge and skills, the prompt and courteous service of a friend and neighbor.
