request from Philip Langwald for extension of the Farmington Plaza Shopping Center into the parking area to the north. The Commission decided to recommend rezoning of the Grossett Property north to Shawwasee in order to complete the commercial area.

Only recently the Council rejected a proposal for rezoning of the Grossett property for multiple dwellings. The rezoning, which had been recommended by the Planning Commission, was turned down after strong protests from adjacent property owners.

Nobody ever gets anything for nothing, but a lot of people keep trying.

To a kid of four years, a man of forty looks as old as Methuselah.

The driver who speeds along at 85 is literally killing time.

F.A.R.C. Program

(Continued from Page 1A)
opening day. Piche emphasized that all youngsters who wish to participate in the program should register on the opening day in order to facilitate planning.

In addition to the regular playground activities and special field trips, swimming days will be set aside for each of the areas. Field trips will be conducted to the Detroit Zoo, Briggs Stadium and Hobbs. Each playground will go to Kent Lake for swimming two days a week. No transportation will be provided, except on swimming days and field trip days, Piche stated.

New York's Coney Island Aquarium, a \$1,300,000 marine showplace, is successor to the Battery Park Aquarium, closed in 1941 to make way for the Brooklyn-Battery tunnel.

Astronomer Sees Scorching Start For Summer

Summer starts officially in Michigan at 11:21 a.m. Friday, June 21, a day that promises to be a real scorcher for the whole Northern Hemisphere, according to University of Michigan astronomer, Professor Hazel Losh.

She explains that Michigan will receive the most heat from the Sun in any 24-hour period of the year on June 21, when the Sun will reach its most direct position over the northern half of the Earth. Fortunately, the Sun then will be about three million miles further away from this planet than it was in January.

Despite the tremendous heat gain the Northern Hemisphere will experience June 21, the chances are very good that day will not be the hottest of the year. Losh continues, Michigan will continue to receive more heat from the Sun than it loses every day until around August 1, so temperatures generally can be expected to keep climbing until then.

June 21 will also be the shortest night in the year for amateur astronomers, with only about nine hours between sunrise and sunset.

Planets of interest to watch for this month include Venus, which will appear very bright on the western horizon for about an hour after sunset by the end of the month. Mars, red in color and rapidly fading in brightness, will be about three hours after the Sun. It will move southward from Gemini to Cancer, passing below the twin stars, Castor and Pollux, and should be readily identified.

Jupiter will be found on the southern meridian about midnight, shining in the southwest until its setting, time around midnight. It is located between Regulus in the constellation of Leo and Spica in Virgo.

Saturn will be visible the whole night through, rising at sunset, and reaching the meridian around midnight. Saturn is situated a few degrees to the northwest of Antares in the constellation of Scorpius. This pair of objects make a striking appearance in the southeast sky during the evening hours.

Saturn is more than twice as bright and not as red as Antares. The ring system of Saturn is always awaited with great pleasure by observers with small telescopes, the U-M astronomer concludes.

Kendallwood

izing the sanitary system. He urged that the Township step up its enforcement of two ordinances designed to prevent storm water from entering the sanitary sewers. Campbell stated that additional personnel will be secured to clean up the filter beds which have been clogged with silt due to recent heavy rains.

It was agreed to hold a conference prior to the next regular Township Board meeting to discuss the cost of studies now being conducted by the Health Department, Thompson-Brown Company and the Township Attorney.

Pointers On Cooking Meals Outdoors Given By Experts

To be prepared for outdoor meals, select from the line of barbecues and broilers one that will suit the family purpose and purse. It is recommended. The brazier seems to be a favorite with the public, though several make their own barbecue pits.

Plans for making a portable barbecue pit from half a drum may be secured by writing Michigan State University Cooperative Extension Service, Agricultural Engineering Department, East Lansing. Ask for plan No. 816-C13.

Regardless of the type used, plan the outdoor kitchen near the back door. It is urged.

If lump charcoal or charcoal briquets are used, there should be enough fuel in the grate to last for the entire cooking process.

Other things you'll have to add to it when your meat or poultry is only partly done. The added fuel will create undesirable flame and smoke, and even heat throughout the grilling will not be provided.

Briquets are made from screened charcoal and held together with corn starch. They are slower to catch fire, but last longer than the lump charcoal. Judging the amount of fuel needed must be learned through experience. Units vary in size and rate of fuel consumption. By using a hood, however, one can cut the use of charcoal by a third.

Before putting the meat on to cook, the charcoal should be reduced to glowing coals with just a brush of white ash on top. It will usually take from half an hour to an hour or more for a good bed of coals.

If using wood, one must give it more time than charcoal to reduce to live coals. Fruit woods and vines give a wonderful flavor to food cooked over them. The next choice is hardwood, such as hickory and oak. Whichever of these fuels used, the coals may burst in flame when the fat from the meat being cooked drips on them. To keep these flames from ruining the meal, dip a whiskbroom in water and whisk it lightly over the coals.

To make Shish Kabobs cut lamb, beef steak, ham or other tender meat into inch squares. Then cut partially cooked potatoes, onions and carrots into thick, cross-section slices.

Arrange alternately on a stick, the vegetables, with pieces of meat. A strip of bacon may be used for fastening. Leave a small space between every piece if you desire them well done; otherwise place them close together. Broil the Shish Kabob over a bed of hot coals until it becomes brown. Put the Shish Kabob between slices of bread or in a bun.

The secret of making excellent hamburgers is to be sure of having good meat, freshly ground. Select a whole piece of meat—top round, rump and sirloin are good choices—allow about 1 pound per person and have it ground to order.

It should be carefully ground, and put through the grinder only once.

When ready to grill the hamburgers, shape the meat into good-sized patties about 1 1/2 inches thick. Don't knead and mold the meat in the hands—simply put it gently into shape. This will give a juicier, more flavorful hamburger.

Ever wonder what makes glue stick?

"Glueability doesn't depend on the roughness of the surface, as is popularly supposed," Alan A. Marra, associate professor of wood technology at University of Michigan, stated. "It depends upon the same forces which hold all materials together. These forces basically are the result of unequal distribution of electrical charges in molecules, and they operate in the same way as the attractive forces in a common bar magnet."

But an adhesive doesn't deploy these forces differently and makes some available for holding onto something besides itself.

"This is accomplished by letting the adhesive pass through a fluid phase while it's in contact with the surfaces to which it must adhere," says Professor Marra.

"Every surface has left-over forces which aren't being used to hold anything since there is no material on one side, and these provide points of anchorage for the adhesive forces."

So if your glue fails, perhaps it's because it solidified before it had a chance to contact both surfaces, or because forces which might normally be available at the surface were being used to hold it to a piece of contaminating substance, the professor suggests.

That's why, he says, adhesives usually come with strict instructions. Keep surfaces clean.

"Around this simple framework of adhesive action have grown a score of basic glues, and these have been compounded and modified by a new breed of scientists—the adhesive technologists—in thousands of formulations," Professor Marra points out.

That's to the adhesive technologist—a combination chemist, technologist, engineer, and magician—glue bands together everything from prefabricated houses to plywood pleasure boats, the professor says. "They're learning by experience how to put molecules to work between two surfaces."

John Timmerman, who resides with his daughter, Mrs. William Burgess on Dohany Drive, is now in Northwest General Hospital for surgery.

CHARLES D. HANNAN

Named To School Design Committee

Farmington architect, Charles D. Hannan, along with eight other leading school designers, has been selected to serve on a special committee to assist the Detroit Board of Education in the planning of better schools.

The selection of the eight-member committee was made by the Detroit Chapter Board of American Institute of Architects. Members will work with the Detroit Board of Education as an advisory group on school design. All members of the committee volunteered their services.

Lin C. Smith of the architect firm of Smith, Tarapata and MacMahon, designers of numerous buildings in the Farmington Public School District, will serve as vice chairman of the committee. Hannan has designed many metropolitan area parochial school buildings including the Our Lady of Sorrows school in Farmington.

Twelve Injured

(Continued from Page 1A)
of Detroit was hit in the rear by another operated by Gerald Bueck in also of Detroit. Chavun had just stopped for a backlog of traffic a short distance east of Drake Road when the accident resulted.

Less than an hour later, two were injured in another accident on Grand River at the other end of the township at the Eight Mile Road intersection. The crash resulted when Arthur Sisler's De-stopped suddenly to allow an ambulance to proceed across Grand River on Eight Mile. His car was struck in the rear by another operated by Joseph Balhorn of Dearborn. Sisler's children, Rita, 6, and Tommy, 15 months, both suffered bruises and shock.

Around 7:15 p.m. the same day three persons were hurt on Grand River at Haggerty Road. A car driven by Dorothy Harford of 30038 Eight Mile Road was hit broadside by another operated by Wilford Russell of Brighton. Injuries suffered by Mrs. Brownell were not determined. Mr. Brownell received lacerations about the arm and Elaine Brownell's bruised nose and injuries to a foot.

Rosvelt Williams of Detroit suffered rib injuries Tuesday around 9:30 a.m. when his truck ran off Farmington Road on McGee Hill and rolled over. He stated that his brakes failed to hold while he was going down the steep hill.

A test version of the Army's Jupiter intermediate range ballistic missile flew more than 1,500 miles, the first successful flight of such a weapon in this country.

DRIVER TRAINING CLASS OFFERED AT CLARENCEVILLE

Driver training facilities are being made available to Parochial school students in the Clarenceville Liberty Street. Scherffius stated that even the Court Room does not provide adequate seating capacity and is not designed to accommodate large public gatherings. The Manager added that the alteration should add greatly to the efficiency of the various city departments as well as convenience to the public. Details of the exact size of the proposed Council Chambers and layout of the offices can not be determined until the sketches have been completed, Scherffius stated.

Farmington's driver training program opened this week with a full class load. Two 4-week sessions have been scheduled for June 17 and July 17 and July 18 to August 16. A single two week session is also planned for August 19 through August 30. James Geiger, high school principal, stated that the program, including both public and parochial school students, was organized this spring.

The extended right arm of the Statue of Liberty is forty-two feet long.

DINNER AT HOME!

Dinner did we say? Wouldcha settle for some cold cuts or some scrambled eggs or something like that? Or wouldn'tcha like to eat outside? You run down to

Conroy's and get a bag of charcoal—they have it in 6 lb. bags and that's gooder cause it goes further. Maybe you should get some of that liquid fire starter and a bug bomb. If we spray the mosquitoes might leave us alone. Then get either hamburger or hot dogs. The fresh ground beef is 49c a lb and the hot dogs are 59c a lb. Might need some catsup so get a couple bottles of Quaker for 35c. If it wasn't so late we could bar-b-q some chickens or ribs. Maybe do that tomorrow night. There's fresh frying chickens for 39c a lb—either cut up or whole and spare ribs are 59c a lb—but they aren't too spare. Got meat on 'em yet. In the frozen food department there's 4 small cans of Birdseye orange juice for 75c. That'll be somethin' cold to drink. Or if you'd rather, there's Minute Maid orangeade for 10c a can. Fer dessert the easy way get 5 boxes of Birdseye frozen strawberries for \$1.00. We like them kinda over ice cream—don't you? If yuh want all the ants in the countryside, plus a few uncles—to come to yer cookout maybe yuh should have watermelon. Kinda wanna remindcha that we have most all kinds of containers fer yer home freezer—and we do have a few lockers available. Wouldcha rather freeze it than stand over a hot stove all day canning???

The Handyman's NOTEBOOK

by: BAYARD TUPPER

"DON'T MESS AROUND WITH IT"

I think it was Louis Armstrong, the world famous jazz trumpeter who once warned another musician: "Man, if you don't know what jazz is, don't mess around with it."

I don't know whether jazz is really as mysterious as all that, but I've often thought that every handyman in the country would have a safer and potentially happier home if he adopted a paraphrase of that same saying: "Man, if you don't know what electricity is, don't mess around with it."

In most household projects—like woodworking, metal craft and painting—I'm a strong advocate of the do-it-yourself school of thought. But when it comes to wiring up your own electrical connections, I repeat, "If you don't know what it is—don't mess around with it." Even if you leave the actual electrical work for an expert, you've still inviting trouble if you:

1. Overload a circuit;
2. Fail to have a proper ground for any fixed appliances or power tools;
3. Use ungrounded metal sockets in damp locations;
4. Let your youngsters play alone with any electrical toys or appliances (except battery-operated toys).

And you're playing it safe if you:

1. Keep all electrical cords in good repair;
2. Use proper guards and extension lamps and properly insulated connectors and sockets intended for outdoors or other damp locations;
3. Make sure all new electrical installations are properly inspected;
4. Pull the main switch whenever fuses are being replaced or work is being done on any electrical circuit.

Sorry if I've sounded a bit "preachy" today, but I don't know any other way of driving home the point that electricity is a potential killer in every home. It just doesn't pay to mess around with it.

Turning to pleasant subjects, have you seen our wonderful stock of do-it-yourself aluminum? You'll be surprised how easy it is to work — using ordinary woodworking tools.

Do TV quiz contestants give you an inferiority complex? Then tune in here next week, and old Doc Tupper will cure you.
