Stainless In Architecture
 Nickel stainless steel is fast becoming one of the world's most widely used architectural materials—particularly for modern skyscrapers. Although in 1927 there was virtually no stainless steel used for such applications, architectural uses of stainless steel currently approach 100,000 tons annually.

Modernizing Kitchens For Convenience, Ease, Beauty

EFFICIENT "WORK TRIANGLE" IN THE KITCHEN CAN SAVE time, steps and energy in meal preparation and kitchen clean-ups. In this modernized all-electric kitchen, the sink, range and refrigerator-freezer are located within easy reach of one another, with work areas situated in between. Conveniently located cabinets provide abundant storage space, and the efficiency of the U-shaped layout is enhanced by a "pass-through" between cooking-eating areas.

Homeowners Want Bigger Kitchen Area

Home owners are getting ready to launch their own space program—and the favored site is the kitchen.

A recent survey conducted for the National Home Improvement Council reveals that the kitchen is the center of attraction for most families planning home improvements. It's the room they would most like to do something about—and "more space" is at the head of the most-wanted list.

Need Appliances
 While the survey brings out the need for more electrical outlets, better lighting, new sinks and new floor coverings, greater priority goes to improvements aimed at providing more cabinet and counter space, more space for better working arrangements, more space for built-ins, more space for eating, more space for activities such as kitchen desk-work and ironing.

Whether the kitchen space program calls for an all-out, all-over remodeling job or step-by-step changes within the framework of the existing floor plan, major appliances are likely to play a large part in the modernization.

Logically, kitchen remodeling time is an appropriate time to make needed replacements of major appliances—and to take advantage of some of the new developments in these appliances. Even though appliances are not outworn, they may be outdated.

New developments include, for space-eager home owners, space-saving designs.
 Save Space
 Refrigerator-freezers, now frost-free for "no defrosting ever" convenience, provide increased food storage capacity yet take up less floor space.

Boot Bench Boom Of Tracking Tots

Have the spring rains invaded your shining floors in the form of child-sized, muddy footprints? A quick cure is a boot bench built in the back hallway, as near the rear entrance as possible. It's just what the name implies—a bench which the children sit on while removing their boots and which also stores the boots inside.

The boot bench can be built, box-style of Douglas fir lumber, with slat construction for the seat and solid pieces for the sides, back and bottom. Leave the front open, however, or enclose it with louvered shutters so that air and warmth circulate through to dry the boots.

If shutters are used for the front (they're stock items), extend the bench seat a couple inches forward to allow kick-space for heels.
