PROPAGATING BY CUTTING

PROPAGATING BY CUTTING

By W. R. GILBERT.

Where thousands of plants are grown for pentitions in the cyen air during the eumener, this is an important propagation in the cyen air during the eumener, this is an important operation from Marcia ownard. Considerable forethought and knowledge of the work are necessary to obtain the plants in suitable condition and in sufficient numbers, when the time for planting out arrives.

Although deeried by some, the searliet geranism still has hosts of admitscree, especially since the introduction of the variety.—Faul transplant of the carried of the varieties of which the numbers are shifted in the didding of the varieties of which it is to be an intended from the holds in the country of the compast of the polyna plants.

Inserted in light, saudy soil they will soon root on a shelf in a warm house. Cuttings of iresiae, coleus, ageratum, helictorpe, verbena, facilasi, librous rooted begonia, etc., when required in quantity should be inserted in a bed of sand made up in a propagating frame with bottom heat. Three inches
