

The best time to put in a lawn is fall! The best one to put in a lawn is the Lawn-A-Mat man!

From his successful experience on over one million lawns coast to coast, the Lawn-A-Mat man knows that Fall seeding is best because:

1. Fall is the seeding time for 15 of 22 seeded grasses including Kentucky Bluegrass and Fescues, the two best kind of lawn grasses.
2. Lawn seed sprouts fastest in cool weather, grows faster too. The Lawn-A-Mat man knows that grass is essentially a cool weather plant. Fall is the time of year when the lawn's enemies, the hot sun, heat, bugs and weeds are on the wane. He agrees with experts who say that Fall is the best time to start a lawn you can be proud of, one that will probably require less expense than you are putting into your present lawn.

Just as Fall is the best time to put in a lawn, the Lawn-A-Mat man is the best man to put in that lawn. Lawn-A-Mat has put in more than one million lawns and has more lawn care professionals from coast to coast than any other service. Its Lawn-A-Mat seed and chemicals are the highest quality, equal to the best you can buy at most garden centers. This means that you get more for your money in the Fall. The Lawn-A-Mat man is offering you Fall Specials to save you even more.

He will do all the work and it will cost you no more than if you did it yourself. All you do is buy the high quality Lawn-A-Magic® products and the work will be done free! Take your choice of two Fall Specials or ask your Lawn-A-Mat man about the Annual Greenskeeper Program.

*Experts from the U.S. Department of Agriculture say "Fall is the best time to start or renovate a lawn"

Hibernation Tips Help RV Owners 'Bear' Season

While winter-time offers lots of attractions to recreation vehicle owners, many enthusiasts prefer to put their units away for a well-earned seasonal rest. When storing recreation vehicles during cold-weather months, the following procedures should be observed.

Winter precautions recommended by the Recreational Vehicle Institute (RVI) include draining all water from the vehicle's water supply tanks and from sink and shower traps. Use compressed air, if available, to blow the last vestiges of moisture from all pipes and adding about a cupful of anti-freeze to each sink and shower drain to prevent freezing of any moisture remaining in the traps. Ask your RV dealer to recommend the correct anti-freeze product.

Units equipped with handpumps should have these pumps removed for winter storage where they will not freeze up. Sewage holding tanks must be properly emptied and drained, and anti-freeze added, even if the unit is to receive continued cold-weather use.

But protecting your RV against freeze-up is only part of your winter storage program. RVI recommends the following additional steps:

1. Jack up trailer or motor home, if it is not going to see winter use,

and put it on good, sturdy wooden blocks.

2. Remove all batteries and store in a warm place. Charge should be applied to stored batteries at least twice during the winter months to prevent formation of sulphuric acid crystals on the lead plates and consequent shorting. Tops of batteries should be thoroughly clean and dry before storing.

3. Windows and vents should be tightly closed; however, crack one window open on the sheltered side of your RV to allow some air to enter.

4. Block up refrigerator, water heater, and heater vents, and all outside drains.

5. Cover all upholstery with old sheets or newspapers to prevent fading. Remove and store curtains and drapes. Some manufactured fabrics tend to dry out or crack under very cold conditions -- it is wise to remove seats and cushions covered with such materials.

6. Thoroughly clean the entire vehicle and apply a coat of good, protective wax. Apply grease to all exposed chrome trim, including the backs of rear-view mirrors, hubcaps, radio antenna, etc.

7. Remove snow accumulations from the exterior of the unit as often as possible.

Needed: Mechanics

Five years from now there will be a need for at least 100,000 more mechanics beyond the approximately 600,000 we have now. With more than 120,000,000 cars expected on the roads in 5 years, that is a conservative estimate.

With car population growing at the rate of 3.4 million a year, there is now only one mechanic for each 170 vehicles. The ideal is one for each 80 cars.

Young people apparently do not understand the earnings and opportunities in the job. Average hourly earnings of mechanics in Detroit are now \$6.13, with some making much more. \$25,000 a year is not unusual.

No auto mechanic will ever be out of work, says the industry, and when "young people" are urged to get in, the ladies are not excluded.
